Features

- The high resolution and high sensitivity images can be obtained using “Super-HAD CCD II” CCD of approx. 480,000 (NTSC) 976 (H) × 494 (V) or approx. 570,000 (PAL) 976 (H) × 582 (V) effective pixels.
 - A CCD for shooting a wide dynamic range is employed to perform progressive or interlaced scanning, and images with a wide dynamic range are obtained by a newly developed image signal processor (Wide Dynamic Range function). Furthermore, the use of the Visibility Enhancer (VE) function will make the darker portion of the subject brighter, and automatically correct brightness and contrast to show bright portion clearly without overexposure.
 - Low-noise images can be obtained even in low light environments using the 3D Noise Reduction (3D NR + 2D NR) function.
 - A function to output interlaced or progressive images by digital output (equivalent to ITU-R BT656) is provided.
 - 28× optical zoom (336× with digital zoom)
 - An Image Stabilizer function enables stable shooting.
 - Supporting external synchronization (V-lock)
 - Images with a high resolution can be obtained using a newly developed Image Signal Processor for improved picture quality.
 - An infrared (IR) Cut-Filter can be disengaged from the image path for increased sensitivity in low light environments. The ICR will automatically engage depending on the ambient light, allowing the camera to be effective in day/night environment.
 - VISCA is a communications protocol, which enables the camera to be controlled remotely from a host computer/controller.
 - Six memory locations are provided to temporally save and recall up to six sets of camera settings.
 - A Privacy Zone Masking function (max. 24 blocks) is available.
 - A mosaic masking function has been added to the privacy zone masking function.
 - A title composed of up to 11 lines can be set for displaying on the screen. 20 characters can be used on one line.
- E-FLIP and Mirror Image functions
 - Alarm function with adjustable detection zones
 - Adjustable AE response speed

With consideration given environmental protection, this module is designed to operate with low power consumption and also incorporates lead-free and halogen-free circuit boards.

Precautions

Software

Use of the demonstration software developed by Sony Corporation or use of the software with customer developed application software may damage hardware, the application program or the camera. Sony Corporation is not liable for any damages under these conditions.

Operation

Start the camera control software on your computer after you turn on the camera and the image is displayed.

Operation and storage locations

Do not shoot images that are extremely bright (e.g., light sources, the sun, etc.) for long periods of time. Do not use or store the camera in the following extreme conditions:

- Extremely hot or cold places (operating temperature -5°C to $+60^{\circ}\text{C}$ (23°F to 140°F))
- Close to generators of powerful electromagnetic radiation such as radio or TV transmitters
- Where it is subject to fluorescent light reflections
- Where it is subject to unstable (flickering, etc.) lighting conditions
- Where it is subject to strong vibration
- Where it is subject to radiation from laser beams

Care of the unit

Remove dust or dirt on the surface of the lens with a blower (commercially available).

Other

- Do not apply excessive voltage. (Use only the specified voltage.) Otherwise, you may get an electric shock or a fire may occur.
- The CCD image sensor and IC included in this camera may break if exposed to static electricity. When directly handling this camera, wear an antistatic strap, spread a conductive sheet or similar item under your workbench, and take measures to eliminate static electricity.
If the unit is occurred the abnormal or malfunction, contact your Sony dealer.

Phenomena specific to CCD image sensors

The following phenomena that may appear in images are specific to CCD (Charge Coupled Device) image sensors. They do not indicate malfunctions.

White flecks

Although the CCD image sensors are produced with high-precision technologies, fine white flecks may be generated on the screen in rare cases, caused by cosmic rays, etc.

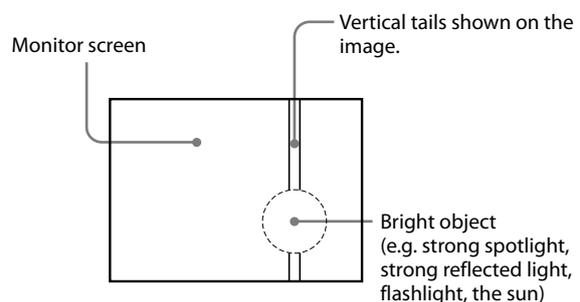

This is related to the principle of CCD image sensors and is not a malfunction.

The white flecks especially tend to be seen in the following cases:

- when operating at a high environmental temperature
- when you have raised the master gain (sensitivity)
- when operating in Slow-Shutter mode

Vertical smear

When an extremely bright object, such as a strong spotlight or flashlight, is being shot, vertical tails may be produced on the screen, or the image may be distorted.

Aliasing

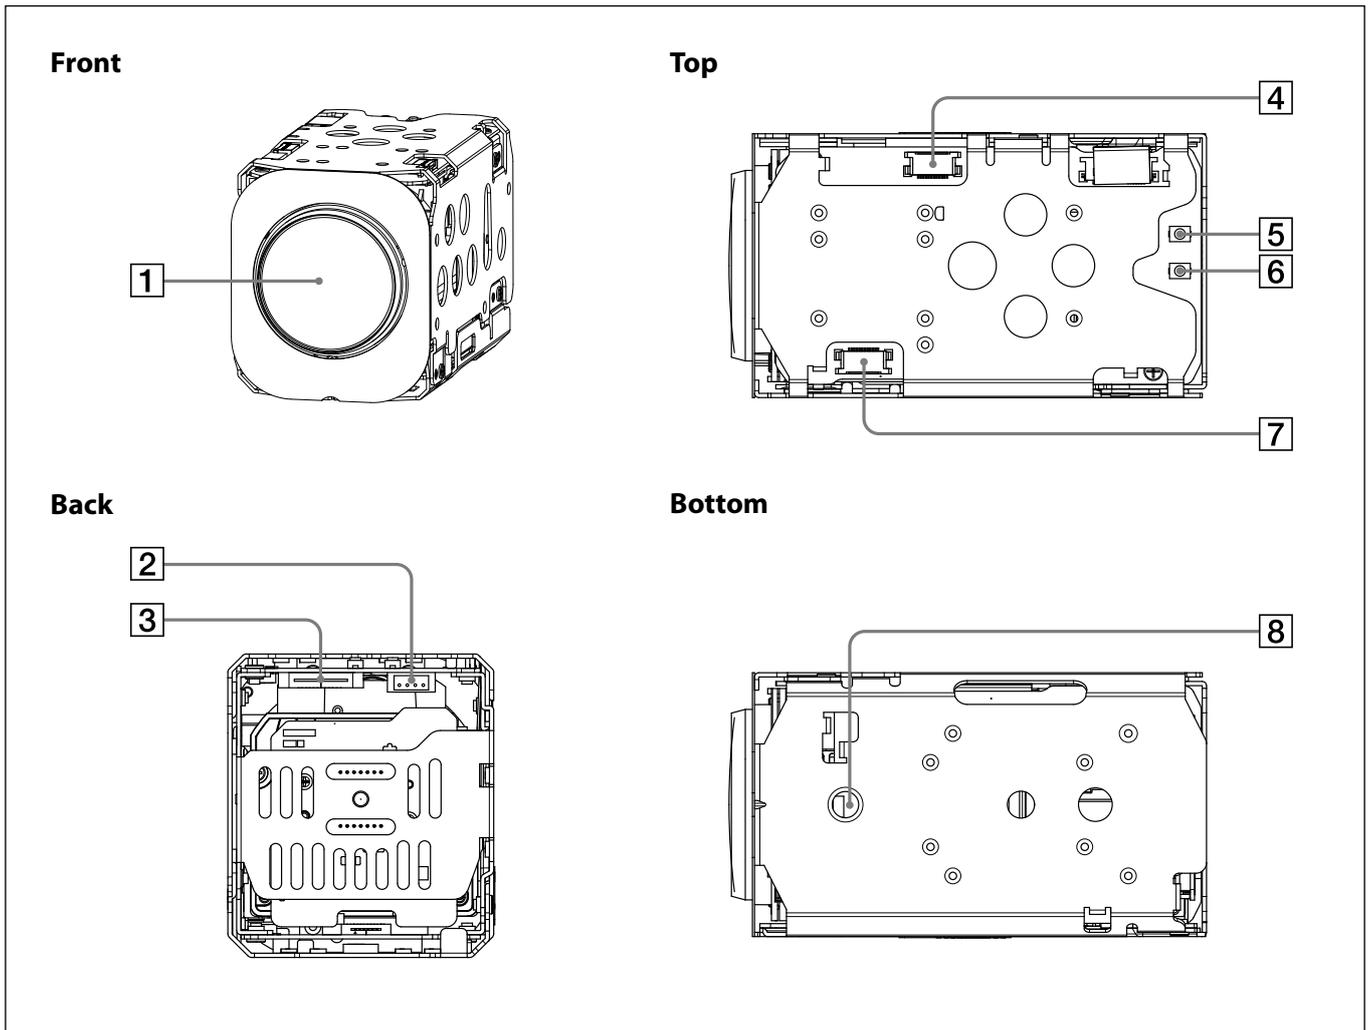

When fine patterns, stripes, or lines are shot, they may appear jagged or flicker.

Phenomena Specific to Lenses

Ghosting

If a strong light source (e.g., the sun) exists near the incidence angle of the lens, bright spots may appear in the image due to diffuse reflection within the lens.

Locations of Controls

- 1 Lens
- 2 CN500 jack (for Y/C output)
- 3 CN501 jack
- 4 CN200 jack (for digital output)

- 5 TELE button
- 6 WIDE button
- 7 CN702 jack (for key SW)

- 8 Tripod screw hole
When a tripod is used, use 4.7 mm ($\frac{3}{16}$ in.) or less screw to attach it to the camera. Also, be sure to attach the tripod securely.

Basic Functions

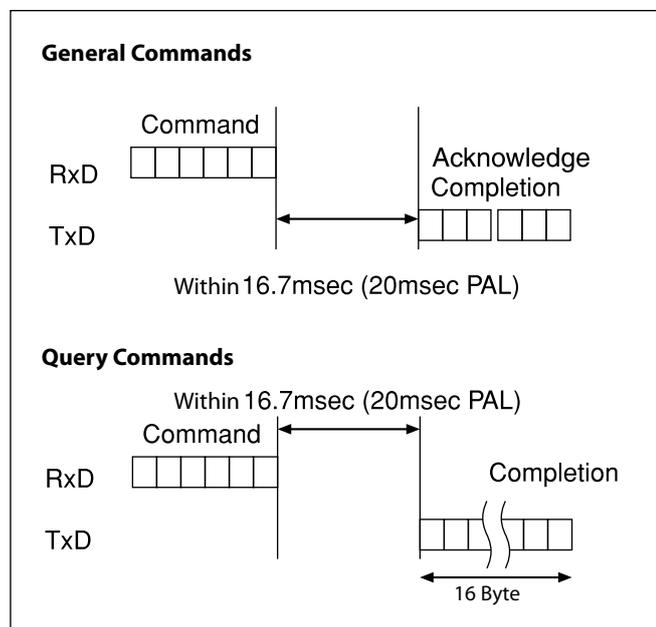

Overview of Functions

VISCA commands are the basis of camera control.

Timing Chart

As VISCA Command processing can only be carried out one time in a Vertical cycle, it takes the maximum 1V cycle time for an Acknowledge/Completion to be returned.

If the Command Acknowledge/Completion communication time can be cut shorter than the 1V cycle time, then every 1V cycle can receive a Command.

In general

• Power On/Off

Powers the camera on and off. When the power is off, the camera is able to accept only the lowest level of VISCA Commands; the display and other features are turned off.

• I/F Clear

Clears the Command buffer of the FCB camera. Clearing the buffer can also be carried out from the control application software when the power is on.

• Address Set

VISCA is a protocol, which normally supports a daisy chain of up to seven connected cameras via RS-232C interface. In such cases, the address set command can be used to assign addresses from 1 to 7 to each of the seven cameras, allowing you to control the seven cameras with the same personal computer. Although the FCB camera does not support direct connection of cameras in a daisy chain, be sure to use the address set command to set the address whenever a camera is connected for the first time.

• ID Write

Sets the camera ID.

• Mute

Blanks the screen and sends out a synchronizing signal.

• Lens Initialize

Initializes the zoom and focus of the lens. Even when power is already on, it initializes the zoom and the focus.

• Comp Scan

Blemish compensation of CCD is performed. Even when power is on it performs blemish compensation of CCD.

Zoom

The FCB camera employs a 28× optical zoom lens combined with a digital zoom function; this camera allows you to zoom up to 336×.

- **Optical 28×, f = 3.5 mm to 98.0 mm (F 1.35 to F 3.7)**

The horizontal angle of view is approximately 55.8 degrees (wide end) to 2.1 degrees (tele end). Digital Zoom enlarges the center of the subject by expanding each image in both the vertical and horizontal directions. When 336× zoom is used, the number of effective picture elements in each direction reduces to $\frac{1}{12}$ and the overall resolution deteriorates.

You can activate the zoom in the following three ways.

- **By pressing the TELE or WIDE buttons on the camera itself**
- **Using a VISCA Command**
 - Using Standard Mode**
 - Using Variable Mode**
 - There are eight levels of zoom speed.
 - Direct Mode**
 - Setting the zoom position enables quick movement to the designated position.
 - Digital Zoom ON/OFF**
 - In these standard and variable Speed Modes, it is necessary to send Stop Command to stop the zoom operation.*
- The Zoom Mode supports a Combined Mode and a Separate Mode.
 - Combined Mode**
 - This is the previously existing zoom method. After the optical zoom has reached its maximum level, the camera switches to Digital Zoom Mode.
 - Separate Mode**
 - In this mode, Optical Zoom and Digital Zoom can be operated separately. You can use digital zoom magnification at any time from within any level of optical magnification.
 - About Continues Zoom position Reply**
 - With ZoomDirect mode, or when zooming according to a preset, the camera outputs zoom position data when Continues Zoom position Reply is set to ON via a command.
 - Continues Zoom position Reply: y0 07 04 69 0p 0p 0q 0q 0q 0q FF
 - pp: D-Zoom position
 - qqqq: Zoom position
- **Using an external key switch board connected to the jack for the key SW.**

Focus

Focus has the following modes, all of which can be set using VISCA Commands.

- **Auto Focus Mode**

The Auto Focus (AF) function automatically adjusts the focus position to maximise the high frequency content of the picture in a center measurement area, taking into consideration the high luminance and strong contrast components.

- **Normal AF Mode**

This is the normal mode for AF operations.

- **Interval AF Mode**

The mode used for AF movements carried out at particular intervals. The time intervals for AF movements and for the timing of the stops can be set in one-second increments using the Set Time Command. The initial value for both is set to five seconds.

- **Zoom Trigger Mode**

When the zoom is changed with the TELE or the WIDE buttons, the pre-set value (initially set at 5 seconds) becomes that for AF Mode. Then, it stops.

AF sensitivity can be set to either Normal or LOW.

- **Normal**

Reaches the highest focus speed quickly. Use this when shooting a subject that moves frequently. Usually, this is the most appropriate mode.

- **LOW**

Improves the stability of the focus. When the lighting level is low, the AF function does not take effect, even though the brightness varies, contributing to a stable image.

- **Manual Focus Mode**

Manual Focus has both a Standard Speed Mode and a Variable Speed Mode. Standard Speed Mode focuses at a fixed rate of speed. Variable Speed Mode has eight speed levels that can be set using a VISCA Command. *In these standard and variable Speed Modes, it is necessary to send Stop Command to stop the zoom operation.*

- **One Push Trigger Mode**

When a Trigger Command is sent, the lens moves to adjust the focus for the subject. The focus lens then holds that position until the next Trigger Command is input.

- **Near Limit Setting Mode**

Can be set in a range from 1000 (∞) to C000 (10 mm).

White Balance

White Balance has the following modes, all of which can be set using VISCA Commands.

• Auto White Balance

This mode computes the white balance value output using color information from the entire screen. It outputs the proper value using the color temperature radiating from a black subject based on a range of values from 3000 to 7500K.

This mode is the factory setting.

• ATW

Auto Tracing White balance (2000 to 10000K)

• Indoor

3200K Base Mode

• Outdoor

5800K Base Mode

• One Push WB

The One Push White Balance mode is a fixed white balance mode that may be automatically readjusted only at the request of the user (One Push Trigger), assuming that a white subject, in correct lighting conditions, and occupying more than 1/2 of the image, is submitted to the camera.

One Push White Balance data is lost when the power is turned off. If the power is turned off, reset One Push White Balance.

• Manual WB

Manual control of R and B gain, 256 steps each

• Outdoor Auto

This is an auto white balance mode specifically for outdoors. It allows you to capture images with natural white balance in the morning and evening.

• Sodium Vapor Lamp Auto

This is an auto white balance mode that is compatible with sodium vapor lamps.

• Sodium Vapor Lamp

This is a fixed white balance mode specifically for sodium vapor lamps.

Automatic Exposure Mode

A variety of AE functions are available for optimal output of subjects in lighting conditions that range from low to high.

• Full Auto

Iris, Gain and Shutter Speed can be adjusted automatically.

• Gain Limit Setting

The gain limit can be set at the Full Auto, Shutter Priority, Iris Priority, Bright, Spot Exposure and Manual in the AE mode. Use this setting when image signal-to-noise ratio is particularly important.

• Shutter Priority ¹⁾

Variable Shutter Speed, Auto Iris and Gain (1/1 to 1/10,000 sec., 16 high-speed shutter speeds plus 6 low-speed shutter speeds)

1) Flicker can be eliminated by setting shutter to

→ 1/100s for NTSC models used in countries with a 50 Hz power supply frequency

→ 1/120s for PAL models used in countries with a 60 Hz power supply frequency

• Iris Priority

Variable Iris (F1.35 to Close, 18 steps), Auto Gain and Shutter speed

• Manual

Variable Shutter, Iris and Gain

• Bright

Variable Iris and Gain (Close to F1.35, 17 steps and F1.35 at 15 steps)

AE – Shutter priority

The shutter speed can be set freely by the user to a total of 22 steps – 16 high speeds and 6 low speeds. When the slow shutter is set, the speed can be $1/30s$, $1/15s$, $1/8s$, $1/4s$, $1/2s$, $1/1s$. The picture output is read at a normal rate from the memory. The memory is updated at a low rate from the CCD. AF capability is low. The displayed number of frame is decreases.

In high speed mode, the shutter speed can be set up to 1/10,000s. The iris and gain are set automatically, according to the brightness of the subject.

Data	NTSC (s)	PAL (s)
15	1/10000	1/10000
14	1/6000	1/6000
13	1/4000	1/3500
12	1/3000	1/2500
11	1/2000	1/1750
10	1/1500	1/1250
0F	1/1000	1/1000
0E	1/725	1/600
0D	1/500	1/425
0C	1/350	1/300
0B	1/250	1/215
0A	1/180	1/150
09	1/125	1/120
08	1/100	1/100
07	1/90	1/75
06	1/60	1/50
05	1/30	1/25
04	1/15	1/12
03	1/8	1/6
02	1/4	1/3
01	1/2	1/2
00	1/1	1/1

AE – Iris priority

The iris can be set freely by the user to 18 steps between F1.35 and Close.

The gain and shutter speed are set automatically, according to the brightness of the subject.

Data	Setting value	Data	Setting value
11	F1.35	08	F6.8
10	F1.6	07	F8
0F	F2	06	F9.6
0E	F2.4	05	F11
0D	F2.8	04	F14
0C	F3.4	03	F16
0B	F4	02	F19
0A	F4.8	01	F22
09	F5.6	00	CLOSE

AE – Manual

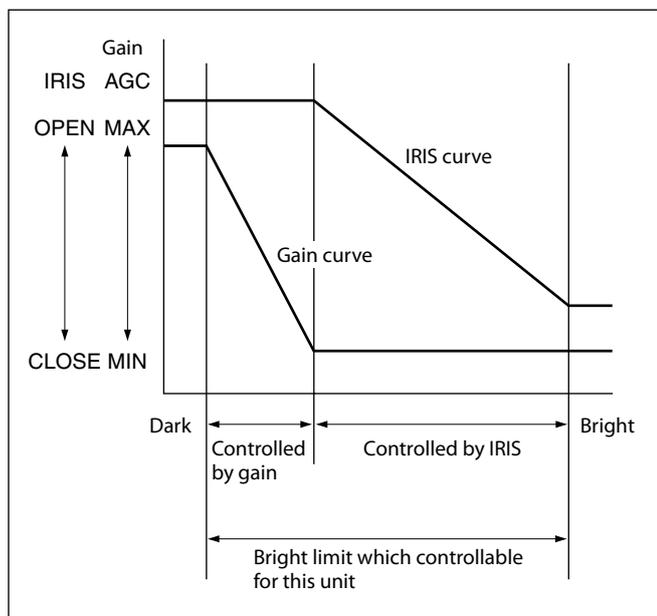

The shutter speed (22 steps), iris (18 steps) and gain (16 steps) can be set freely by the user.

AE – Bright

The bright control function adjusts both gain and iris using an internal algorithm, according to a brightness level freely set by the user. Exposure is controlled by gain when dark, and by iris when bright.

As both gain and iris are fixed, this mode is used when exposing at a fixed camera sensitivity. When switching from Full Auto or Shutter Priority Mode to Bright Mode, the current status will be retained for a short period of time.

Only when the AE mode is set to “Full Auto” or “Shutter Priority,” you can switch it to “Bright.”

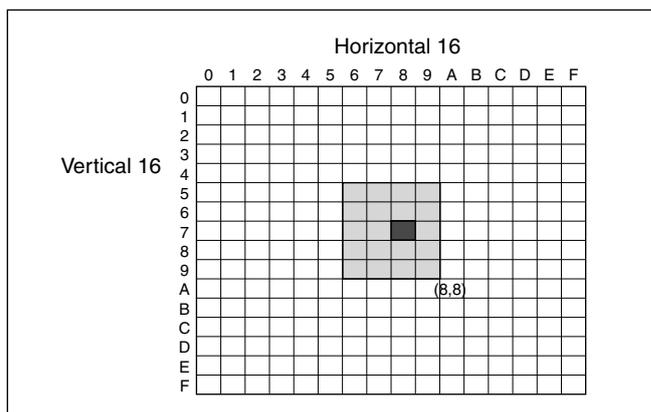

Data	Iris	Gain	Data	Iris	Gain
1F	F1.35	28 steps	0F	F2	0 step
1E	F1.35	26 steps	0E	F2.4	0 step
1D	F1.35	24 steps	0D	F2.8	0 step
1C	F1.35	22 steps	0C	F3.4	0 step
1B	F1.35	20 steps	0B	F4	0 step
1A	F1.35	18 steps	0A	F4.8	0 step
19	F1.35	16 steps	09	F5.6	0 step
18	F1.35	14 steps	08	F6.8	0 step
17	F1.35	12 steps	07	F8	0 step
16	F1.35	10 steps	06	F9.6	0 step
15	F1.35	8 steps	05	F11	0 step
14	F1.35	6 steps	04	F14	0 step
13	F1.35	4 steps	03	F16	0 step
12	F1.35	2 steps	02	F19	0 step
11	F1.35	0 step	01	F22	0 step
10	F1.6	0 step	00	CLOSE	0 step

When switching from the Shutter Priority mode to the Bright mode, the shutter speed set in the Shutter Priority mode is maintained.

Spot Exposure Mode

In Full Auto AE, the level for the entire screen is computed and the optimum Auto Iris and Gain levels are determined. In Spot AE, a particular section of the subject can be designated, and then that portion of the image can be weighted and a value computed so that Iris and Gain can be optimized to obtain an image. For example, in an image with a lot of movement and with varying levels of brightness, portions without much change can be designated as such a “spot,” and changes to the screen can be minimized in that area. As shown in the diagram below, a range of 16 blocks vertically and 16 blocks horizontally can be designated. In the case where the center is designated (shown in black), the level is computed along with a weighted value for the surrounding block (shaded), including the specified portions; and then the Gain and Iris are set. The value of the designated portions and the surrounding areas should be calculated as 100%, the rest should be set to 20%. The range of the Spot AE frame is fixed to 5 blocks vertically and 4 blocks horizontally.

Exposure Compensation

Exposure compensation is a function which offsets the internal reference brightness level used in the AE mode, by steps of 1.5 dB.

The reference brightness is 0.

Data	Step	Setting value
0E	+7	+10.5 dB
0D	+6	+9 dB
0C	+5	+7.5 dB
0B	+4	+6 dB
0A	+3	+4.5 dB
09	+2	+3 dB
08	+1	+1.5 dB
07	0	0 dB
06	-1	-1.5 dB
05	-2	-3 dB
04	-3	-4.5 dB
03	-4	-6 dB
02	-5	-7.5 dB
01	-6	-9 dB
00	-7	-10.5 dB

Slow AE (Automatic Exposure)

The slow AE Response (automatic exposure) function allows you to reduce the exposure response speed. Usually the camera is set up so that the optimum exposure can be obtained automatically within about 1 second. However, using the slow AE response function allows you to lengthen the automatic exposure response speed from the factory setup speed (01 (hex) up to approx. two minutes (30 (hex))). For example, with the normal setting (about 1 second), if the headlights of a car are caught by the camera, the camera automatically adjusts the exposure so that it can shoot a high-intensity subject (in this case, the headlights). As a result, images around the headlights, that is, the rest of the subject, except the headlights, becomes relatively dark, and poorly distinguished. However, using the slow AE function means the AE response speed will be slower, and response time will be longer. As a result, even if the camera catches a high-intensity subject (e.g., the headlights) for a moment, you can still easily distinguish the portions of the image surrounding the headlights.

High Resolution Mode (Default)

A newly developed ISP function enables the filtering of signals. This allows the camera to provide images with a high resolution.

Aperture Control

Aperture control is a function which adjusts the enhancement of the edges of objects in the picture. There are 16 levels of adjustment, starting from “no enhancement.” When shooting text, this control may help by making them sharper.

Back Light Compensation

When the background of the subject is too bright, or when the subject is too dark due to shooting in the AE mode, back light compensation will make the subject appear clearer.

Wide Dynamic Range Mode (WD)

The Wide Dynamic Range mode is a function for dividing an image into several blocks and correcting blocked-up shadows and blown-out highlights in accordance with the intensity difference. It enables you to obtain images in which portions ranging from dark to light can be recognized, even when capturing a subject with a large intensity difference that is backlit or includes extremely light portions. A CCD for shooting a wide dynamic range is employed, and a newly developed image signal processor combines a long exposure signal (normal shutter) and a signal of the high intensity portions obtained by a short exposure (high-speed shutter) to achieve images with a wide dynamic range.

The Wide Dynamic Range mode includes the following operation modes.

- **WD Mode**

According to the intensity difference, the long exposure and short exposure are automatically adjusted, and the contrast is automatically adjusted by VE.

- **Exposure Ratio Mode**

The shutter speed ratio between the long exposure and short exposure is fixed by performing only the long exposure control. The short exposure is set by the exposure ratio with respect to the long exposure, and the contrast is automatically adjusted by VE.

- **VE (Visibility Enhancer) Mode**

This mode automatically adjusts the brightness and contrast of the dark portion and bright portion of a single image without combining two images.

Supplemental explanation

In the WD mode, there is a restriction as follows.

- When 60p/50p is output, the information amount is equivalent to 30p/25p because the long exposure signal and short exposure signal are combined. As for during the VE mode and interlace output, the information amount will be 60p/50p. As for the VE mode, the information amount of 60p can be used because it performs processing with a single image without a change in the frame rate even when the progressive mode CCD reading is performed.

When 30/25 fps is output, the WD mode cannot be ON. Use the VE mode.

• About WD Set Parameter

(Command: **8x 01 04 2D 0p 00 00 00 0t 0u 0v 0w FF**)

- p: Screen display (0: Combined image, 1: Long/short division, 2: Long-time, 3: Short-time)
Set the screen display to a WD combination image, long/short exposure division image, long exposure image, or short exposure image.
- tu: Parameter to use in the exposure ratio mode.
Specify the short exposure time by setting the magnification ratio ($\times 1$ to $\times 128$) with regards to a long exposure time.
- v: Maximum gain (0: low 1: middle 2: high)
The gain amount for correcting the blocked-up shadow is adjusted.
- w: 0: low intensity priority 1: balance 2: high intensity priority
In the low intensity priority, the contrast of dark portion is emphasized with high priority.
In the high intensity priority, the contrast of bright portion is emphasized with high priority.

Notes

The following phenomena are unique to the wide dynamic range mode, and are not an indication of camera malfunction.

- Solarization may be observed in the images of some subjects.
- Since the image is generated by combining the long exposure and short exposure, noise may appear in the combined area.
- Flickering may appear when a flashing light source like fluorescent lamp is shot.

Noise Reduction

The NR (Noise Reduction) function removes noise (both random and non-random) to provide clearer images. By combining 2D filtering according to brightness and image color, and 3D filtering according to noise caused by motion and time difference, lower-noise images can be obtained for the corresponding image brightness of a moving subject.

This function has six steps: levels 1 to 5, plus off. Level 1 applies to subject motion mainly using 2D filter effects. With level 5, 2D and 3D filter effects are maximized, providing the lowest-noise images, although moving subjects may show trails. At each level, two filters are set according to noise and image motion characteristics, so the available level selections depend on the situation. The default setting is level 3.

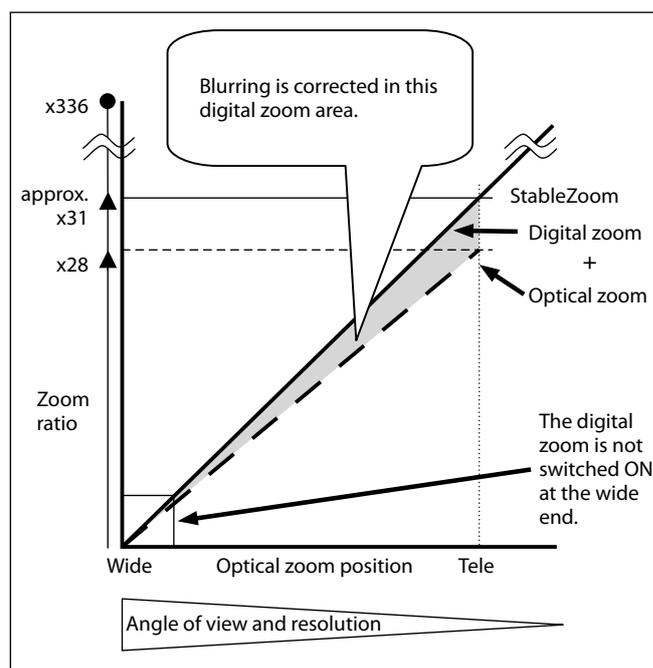

When the wide dynamic range mode (not including VE mode) is ON in the progressive mode, only the 2D filter operates.

StableZoom™

StableZoom is a function for performing correction using the Image Stabilizer function in accordance with the zoom ratio, and smoothly zooming up to approximately $\times 31$ using a combination of the optical zoom and digital zoom. The digital zoom can be further used to zoom up to $\times 336$.

At the wide end, you can obtain images without any reduction in the angle of view and resolution because the digital zoom is not switched ON. On the other hand, at the Tele end, the correction effect by the Image Stabilizer function is at its maximum so blurring is reduced.

The StableZoom function can be switched ON/OFF in the register settings.

Color Enhancement

A captured color image is converted to 256 levels of gray, and the binarization process is performed to convert all gray levels brighter than the threshold value to white, and all gray levels darker than the threshold value to black. (Any value can be set for the threshold level and hysteresis width.) Furthermore, any color can be assigned to each of the negative and positive.

Note

Flickering in images during color enhancement is not an indication of a camera malfunction. It can be reduced with the threshold level, hysteresis width, and edge enhancement (aperture) settings.

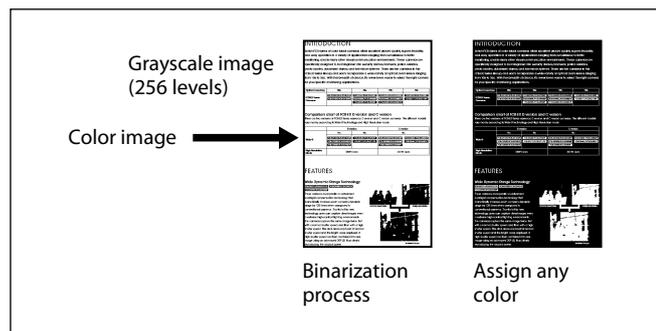

Image Stabilizer

Switching ON the Image Stabilizer function reduces image blurring caused by, for example, vibration, which allows you to obtain images without much blurring. A correction effect of approximately 90% is possible for a vibration frequency of around 10 Hz.

The Image Stabilizer function employs the digital zoom system, so the angle of view and resolution are changed, but the sensitivity is maintained.

Hold Function of Image Stabilizer

With the Image Stabilizer function, suddenly stopping high-speed movement (pan, tilt, etc.) of the camera produces a blur sensor counteraction that may cause image movement. In such a case, you can use a command setting (hold) to maintain the correction of the Image Stabilizer function. In this case the image stabilizer is off, but there is no change in the angle of view.

Temperature Reading Function

The conversion value (hex) of the temperature sensor built into the camera can be read by using a query command. The conversion value has an error of $\pm 3^{\circ}\text{C}$, and because the temperature sensor is inside the camera, this value is not the ambient temperature. Use it as a reference value.

Slow shutter – Auto/Manual

When set to “Auto,” ensures that the slow shutter is set automatically when the brightness drops. Effective only when the AE mode is set to “Full Auto.”

Set to “Slow Shutter Manual” at shipment.

Note

The Slow Shutter Auto function is not available in WD mode.

ICR (IR Cut-Removable) Mode

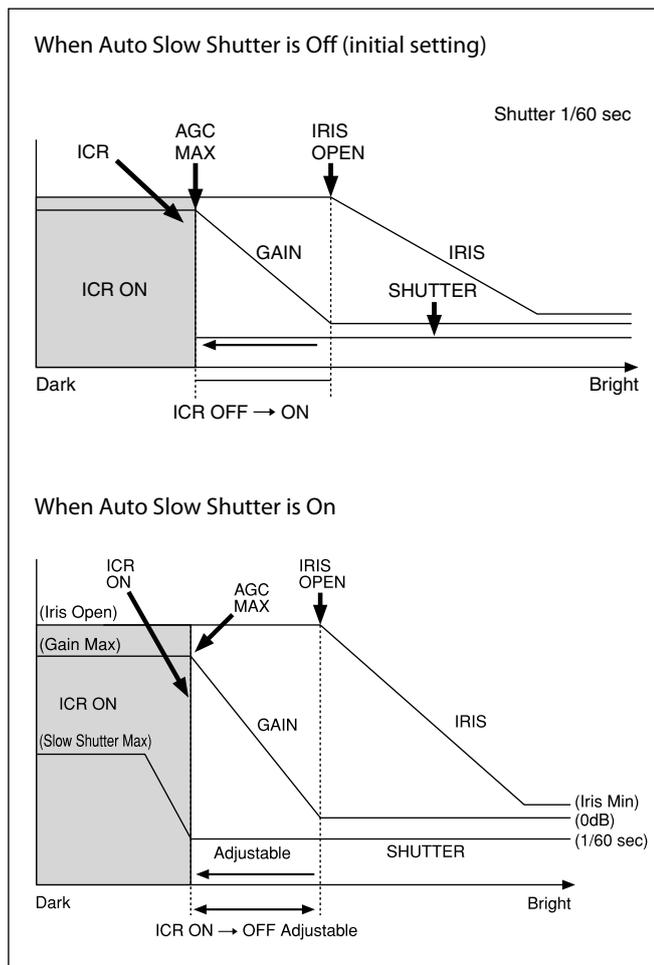

An infrared (IR) Cut-Filter can be disengaged from the image path for increased sensitivity in low light environments. The ICR will automatically engage depending on the ambient light, allowing the camera to be effective in day/night environments.

When the auto ICR mode is set to ON, the image becomes black and white.

Auto ICR Mode

Auto ICR Mode automatically switches the settings needed for attaching or removing the IR Cut Filter. With a set level of darkness, the IR Cut Filter is automatically disabled (ICR ON), and the infrared sensitivity is increased. With a set level of brightness, the IR Cut Filter is automatically enabled (ICR OFF). Also, on systems equipped with an IR light, the internal data of the camera is used to make the proper decisions to avoid malfunctions.

Auto ICR Mode operates with the AE Full Auto setting.

**Note**

When in Auto_ICR_OFF state and WB data is added (default), a malfunction may occur when the subjects largely consisting of blue and green colors are taken.

Visibility Enhancer (VE)

Using the Visibility Enhancer function will make the darker part of a camera image brighter as well as automatically correct brightness and contrast to show bright parts clearly without overexposure.

Defog mode

When the surrounding area of the subject is foggy and low contrast, the defog mode will make the subject appear clearer by emphasizing the contrast automatically.

Note

In the defog function, the low contrast is considered to be fog and corrected. Therefore, when a subject such as flat wall is shot, it is falsely recognized as fog, and the contrast may be emphasized unnaturally.

Camera ID

The ID can be set up to 65,536 (0000 to FFFF). As this will be memorized in the nonvolatile memory inside, data will be saved regardless of whether it has been backed up.

Effect

It consists of the following functions.

- **Neg. Art:** Negative/Positive Reversal
- **Black White:** Monochrome Image

Others**E-FLIP**

This function turns the video output from the camera upside down.

Mirror Image

This function reverses the video output from the camera horizontally.

Freeze

This function captures an image in the field memory of the camera so that this image can be output continuously.

Because communication inside the camera is based on V cycle, the captured image is always the one 3V to 4V after the sending of a Command. Thus, you can not specify a time period after sending EVEN, ODD or a Command.

Memory (Position preset)

Using the position preset function, 6 sets of camera shooting conditions can be stored and recalled. This function allows you to achieve the desired status instantly, even without adjusting the following items each time.

- **Zoom Position**
- **Digital Zoom On/Off**
- **Focus Auto/Manual**
- **Focus Position**
- **AE Mode**
- **Shutter control parameters**
- **Bright Control**
- **Iris control parameters**
- **Gain control parameters**
- **Exposure Compensation On/Off**
- **Exposure Level**
- **Backlight Compensation On/Off**
- **Slow Shutter Auto/Manual**
- **White Balance Mode**

- R/B Gain
- Aperture Control
- ICR Shoot On/Off
- WD On/Off
- WD Parameter
- Defog On/Off

Custom Preset

As with the position preset function, the camera shooting conditions can be stored and recalled. The settings are recalled when the power is turned on.

For setting items, see the “Initial Settings, Custom Preset and Backup” section on page 26.

User Memory Area

A user area of 16 bytes allows you to write data, such as an ID for each customer, data for each system, and so on, freely.

Note

Rewriting of memory is not unlimited. Be careful to avoid using the memory area for such as unnecessary tasks as rewriting the contents of the memory for every operation.

Register Setting

The camera's default settings can be changed by the register setting command.

Register Setting Command:

8x 01 04 24 mm 0p 0q FF
 mm: Register No. (=00 to 7F)
 pq: Register Value (=00 to FF)

Register Inquiry Command:

8x 09 04 24 mm FF
 mm: Register No.
 y0 50 0p 0p FF
 pp: Register Value
 (returned from the camera)

Example: To set communication speed to 38400 bps

8x 01 04 24 00 00 02 FF
 After sending this command, turn power off and back on (power reset) to resume communication control at 38400 bps.

Example: Sending to confirm settings

8x 09 04 24 00 FF
 y0 50 00 03 FF is returned from the camera

The register setting items and No. are as follows.

Baud Rate: 00

Communication speed can be changed.

OSD Language: 60

OSD Language can be changed.

CCD Scanning Mode: 72

CCD scanning mode can be changed.

Digital Output Mode: 73

The FCB camera supports various output modes. This register “73” allows changing the output mode.

For details, see “Register Setting” on page 54.

Zoom Limit: 50 (Wide end), 51 (Tele end)

The Wide and Tele zoom limits can be set.

E-Zoom Max: 52

The maximum digital zoom limit can be specified (default is ×12).

StableZoom: 53

The StableZoom command can be enabled and disabled with this command.

FocusTrace: 54

When zoom speed is given priority, using the ZoomDirect command changes focus at high speed (although the image may be blurred because focus is not tracked). For example, the focus transition time from Wide to Tele ends, which typically takes 2.5 seconds, can be reduced to 1.7 seconds.

FocusOffset: 55

Placing a dome cover in front of the camera may cause the focal distance of the camera to change. Especially at the Tele end, this effect exceeds the AF range, so focus cannot track, although it responds to changes in this value.

For details, see “Register Setting” on page 54.

Privacy Zone Masking Settings

For details, see page 16.

Motion detection

For details, see page 20.

Title Display

- You can set a title composed of up to 11 lines. One line can contain up to 20 characters.
- You can set display on/off, the horizontal position of the first character, blinking state and color for each line.
- The camera gives priority to lines of a title when the camera status is displayed on the relevant line. On the lines where a title is not set, the camera status is displayed.

Line Number	00 to 0A	
H-position	00 to 17	
Blink	00: Does not blink	
	01: Blinks	
Color	00	White
	01	Yellow
	02	Violet

Note

Noise may occur when performing phase adjustment with the Line Lock mode, although it should disappear when switching to Frequency Lock mode for external sync.

Because V-lock synchronization is a simple synchronization method, color signals like a VBS “Genlock” signal cannot be synchronized.

1) In V-lock synchronization, the camera makes a V-lock pulse (VL-PULSE) which synchronizes to the commercial power supply and uses it as the external synchronization input signal of the camera, using the fact that the V cycle (59.94 Hz vertical synchronization signal) and the frequency of the commercial power supply (60 Hz). The synchronous signal of the camera will automatically synchronize to the VL-PULSE in the camera.

Synchronization methods

Internal and external synchronization are available; VISCA Commands allow you to switch between them.

• Internal synchronization

An internal vibrator inside the camera generates a synchronizing signal as a basic oscillator.

NTSC=59.94 Hz

PAL=50 Hz

• External synchronization (V-Lock Synchronization ¹⁾)

When a TTL level V-Lock pulse is input, the camera synchronizes to the input signal (V-lock synchronization). The frequency of the input signal synchronizes to within ± 1 Hz of the external synchronization.

Also, 360 degree phase adjustment is possible due to the phase adjustment of the V-lock signal.

When adjusting V-Phase, first make the phase adjustment with the Line Lock mode, then switch to Frequency Lock mode and enable external sync. If not performing phase adjustment, switch to Frequency Lock mode then enable external sync. See “Command List” on page 31.

Privacy Zone Masking Function

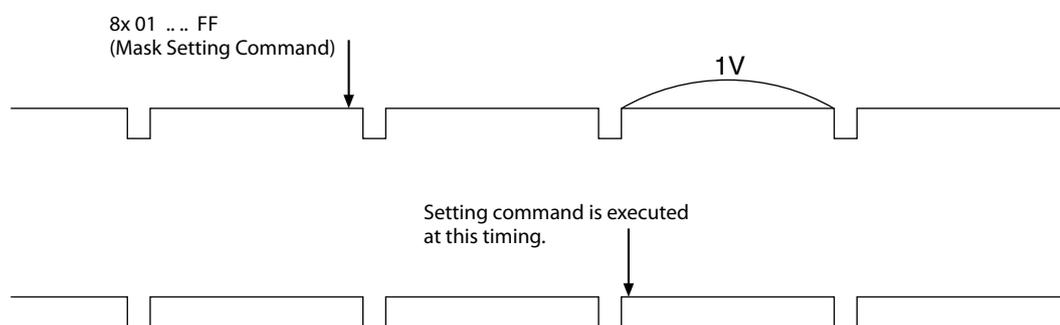

Privacy Zone masking protects private objects and areas such as house windows, entrances, and exits which are within the camera's range of vision but not subject to surveillance.

Privacy zone masking can be masked on the monitor to protect privacy.

Features

- Mask can be set on up to 24 places according to Pan/Tilt positions.
- Mask can be displayed on 8 places per screen simultaneously.
- Privacy Zones are displayed according to priority in alphabetical order.
- Individual on/off zone masking settings.
- Selected two colors can be individually set for each of 24 privacy zones.
- Interlocking control with zooming.
- Interlocking control with Pan/Tilt.
- Non-interlocking control with Pan/Tilt.

Timing chart

Privacy Zone Setting Command List

Command Set	Command	Command Packet	Comments
CAM_PrivacyZone	SetMask	8x 01 04 76 mm nn 0r 0r 0s 0s FF	Setting Mask(Size) See “mm: Mask setting list”, “nn: Setting”, and “pp: x, qq:y, rr: w, ss: h” in “Parameters” on page 18.

Setting pan/tilt angle

Details of Setting Commands

Set Mask

Command: 8x 01 04 76 mm nn 0r 0r 0s 0s FF

Parameter:

mm	Setting Mask See “mm: Mask setting list” in “Parameters” on page 18.
nn	Selects new setting or resetting for the zone. See “nn: Setting” in “Parameters” on page 18.
rr	Sets the half value “w” of the Mask Width.
ss	Sets the half value “h” of the Mask Height. See “pp: x, qq: y, rr: w, ss: h” in “Parameters” on page 18.

Comments: To set the mask, first display the object at the center of the screen. When “nn” is set to 1, the current Pan/Tilt/Zoom position is recorded in internal memory.

When “nn” is set to 0, the Pan/Tilt/Zoom position in memory is not changed.

Notes

- The tilt angle at which you can set the mask is between -70 to +70 degrees.
- It is recommended that you set the size to at least twice the size of the object (height and width).

Set Display

Command: 8x 01 04 77 pp pp pp FF

Parameter:

pp pp pp pp	Each 24 Privacy Zones corresponds to the BIT. See “pp pp pp pp: Mask bit” in “Parameters” on page 18.
-------------	--

Comments: Each of 24 Privacy zones can be switched on and off individually by a single VISCA command. If you want to display a Privacy zone, you must set its bit to 1. If you do not want to display a Privacy zone, you must set its bit to 0.

Set Mask Color

Command: 8x 01 04 78 pp pp pp pp qq rr FF

Parameter:

pp pp pp pp	Each 24 Privacy Zones correspond to the BIT. See “pp pp pp pp: Mask bit” in “Parameters” on page 18.
qq	Set the color code include the semi-transparency code.
rr	Set the color code include the semi-transparency code. See “qq, rr: Color code” in “Parameters” on page 18.

Comments: Two different color masks can be chosen.

The colors can be chosen from among 14 colors including the possibility for semi-transparency of each color. Therefore two colors from among the total of 29 colors including mosaic can be individually set for each of 24 privacy zones.

If the bit of parameter (pp pp pp pp) is set to “0”, mask color will be “qq” color (Color code). If the bit of parameter (pp pp pp pp) is set to “1”, the mask color will be “rr” color (Color code).

Example: 8x 01 04 78 00 00 00 03 10 07 FF

The mask color setting of Mask_A and Mask_B is White (color code 07h), and the mask color of the other Mask (C to X) is semi-transparent Black (color code 10h).

Set Pan/Tilt Angle

Command: 8x 01 04 79 0p 0p 0p 0q 0q 0q FF

Parameter:

ppp	Pan Angle
qqq	Tilt Angle See “Setting pan/tilt angle” in “Parameters” on page 18.

Comments: Pan/Tilt angle settings are hexadecimal data.

The resolution of Pan/Tilt angle is 0.088 degrees.

Note

When you set the pan/tilt angle, locate the pan/tilt position at the center point of the FCB camera’s position.

Set PTZ Mask

Command: 8x 01 04 7B mm 0p 0p 0p 0q 0q 0q 0r 0r 0r 0r FF

Parameter:

mm	Setting Mask See “mm: Mask setting list” in “Parameters” on page 18.
ppp	Pan Angle (000 to FFF) See “Setting pan/tilt angle” in “Parameters” on page 18.
qqq	Tilt Angle (000 to FFF) See “Setting pan/tilt angle” in “Parameters” on page 18.
rrrr	Zoom Position (000 to 4000) See “Zoom Ratio and Zoom Position (for reference)” on page 52.

Comments: Mask can be set at the desired position by setting the pan tilt angle and zoom position using a command. The set value can be input by hexadecimal number.

Non Interlock Mask

Command: 8x 01 04 6F mm 0p 0p 0q 0q 0r 0r 0s 0s
FF

Parameter:

mm	Setting Mask See "mm: Mask setting list" in "Parameters" on page 18.
pp	Sets the center position "x" of the Mask on screen.
qq	Sets the center position "y" of the Mask on screen.
rr	Sets the half value "w" of the Mask Width.
ss	Sets the half value "h" of the Mask Height. See "pp: x, qq: y, rr: w, ss: h" in "Parameters" on page 18.

Comments: Mask does not interlock with pan/tilt.

The limitations of parameters are as follows.
(hexadecimal representation)

x: $\pm 50h$

w: $\pm 50h$

y: $\pm 3ch$

h: $\pm 3ch$

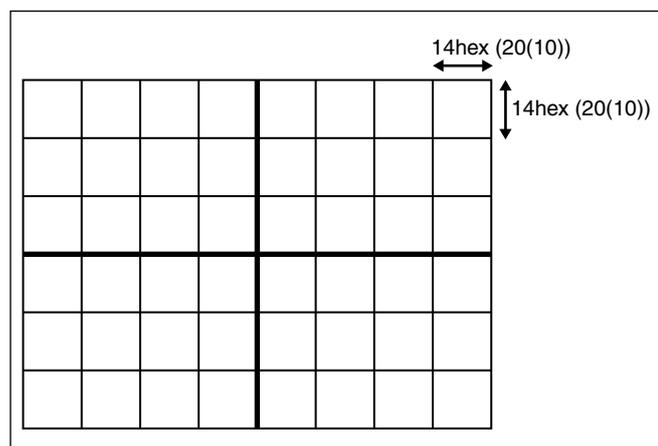

Note

When the Set Mask command and the Non Interlock Mask command are set to the same mask, the command set later becomes effective.

Grid

Use the grid displayed on the screen to set mask positions (see the figure below).

By executing the Center Line On command, only the x and y axes of the center are displayed. Grids lines disappear.

Motion Detection Function

This function instructs the camera to detect movement within the monitoring area and then send an alarm signal automatically.

The detected signal goes out through the serial communication line (VISCA command).

Features

- You can set a frame for the detection range of 12 (horizontally) \times 8 (vertically) blocks.
- You can set up to four frames.
- When the motion is detected in the set frame, the Alarm Replay VISCA command is sent.
- The threshold level for detection can be set (common to four frames).
- The interval of alarm detection can be set up to 256 seconds in units of one second.
- You can set on/off for each frame.
- The frame number is also sent with Alarm Replay to report in which frame the motion has been detected.

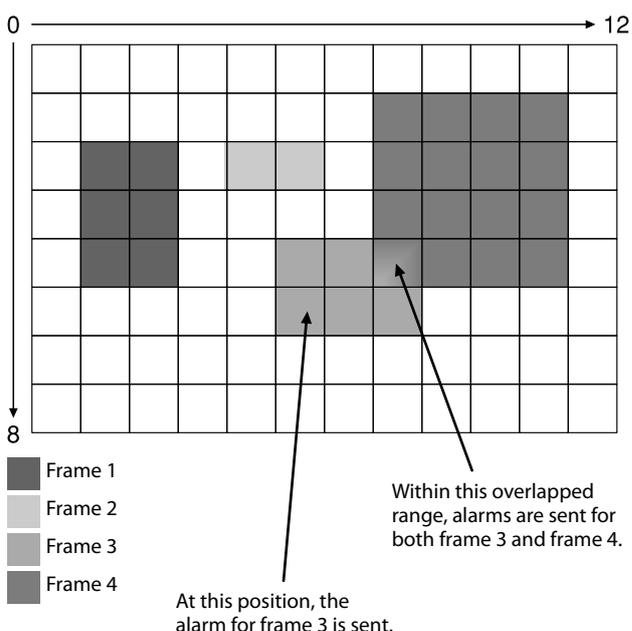

Frames

Setting frames

You can set the frame by assigning the starting point and terminating point vertically and horizontally. You can set up to four frames.

When motion is detected within the range where frames overlap

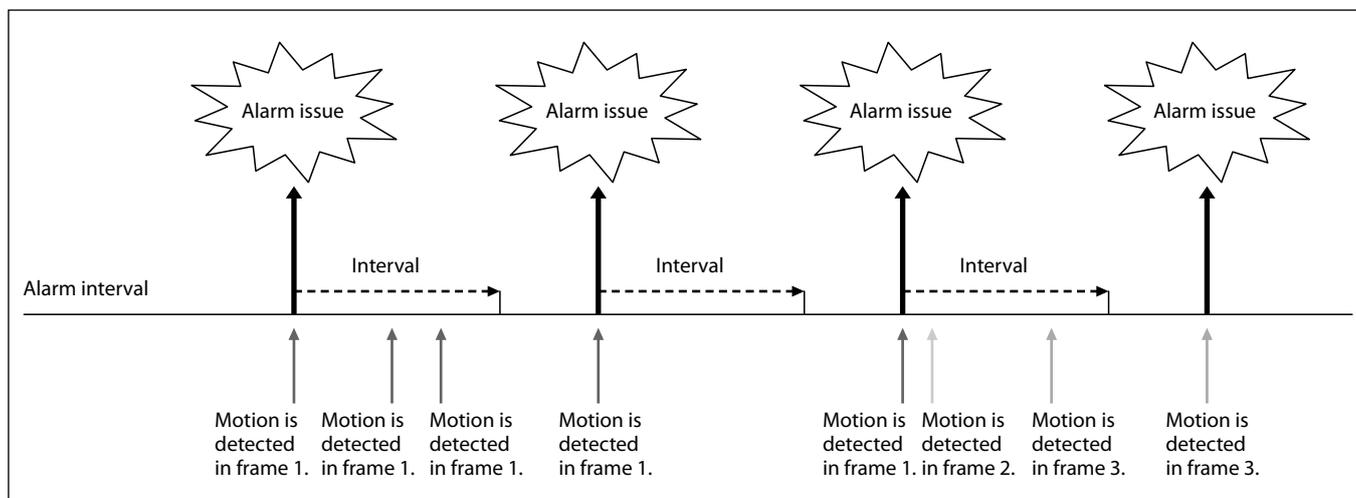

The alarms are sent for both frames.

Sending Alarms

- When motion is detected, the Alarm Replay command is issued via the serial command (VISCA) communication line.

- When multiple motions are detected or motion is detected in another frame within the set interval following the original time the alarm was issued, another alarm command is not issued.
- When motion is detected after the interval time elapsed, the alarm is issued again.

Setting Commands

• MD On/Off

The Display mode is set by the Function Set command and frames are set by the Frame Set command. By sending an MD On command, the frame is displayed when motion is detected in the set frame. The Alarm Reply command is issued via the serial command (VISCA) communication line.

```
8x 01 04 1B 02 FF --- On
8x 01 04 1B 03 FF --- Off
```

• Function Set

Select the detected frame, and set the Threshold Level and the Interval Time.

```
8x 01 04 1C 0m 0n 0p 0q 0r 0s FF
m: Display Mode          on/off (bit0: Frame)
n: Detection Frame set  on/off (bit0:Frame0, bit1:
   Frame1, bit2:Frame2, bit3:Frame3)
                                -- (0 to F)
pq: Threshold            -- (00 to FF)
rs: Interval time set    -- (00 to FF)
* (When pq and rs are 0, the command is received, but
  the setting is disabled.)
```

• Frame Set

You can set up to four frames by assigning the starting and terminating points.

Note

Set a terminating point higher vertically and horizontally than the starting point. If you set the wrong value, the command yields an error.

```
8x 01 04 1D 0m 0p 0q 0r 0s FF
m: Select Detection Frame (0: Frame0, 1: Frame1, 2:
   Frame2, 3: Frame3)          -- (0, 1, 2, 3)
p: Frame set Start Horizontal Position -- (00 to 0B)
q: Frame set Start Vertical Position  -- (00 to 07)
r: Frame set End Horizontal Position  -- (01 to 0C)
s: Frame set End Vertical Position    -- (01 to 08)
```

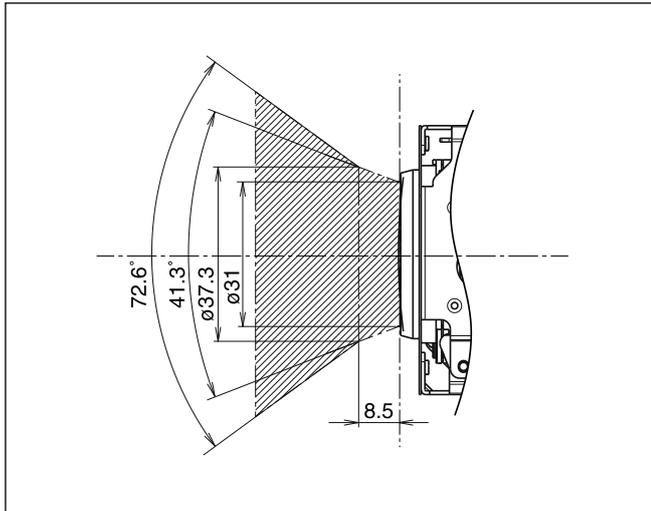

• Alarm Reply

When motion is detected in the set frame, the camera issues this command. This command includes the information on the number of the detected frame.

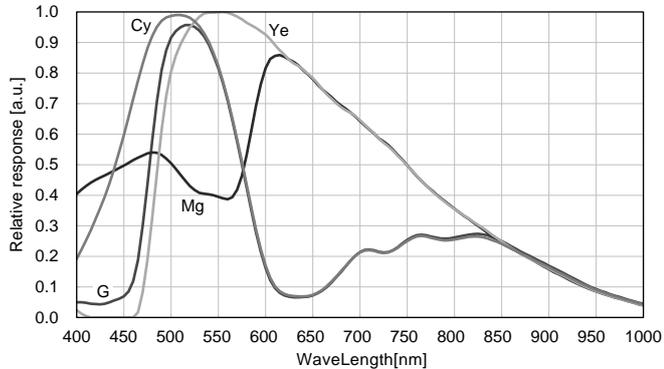

```
y0 07 04 1B 0p FF
p: Frame Number (bit0: Frame0, bit1: Frame1, bit2:
   Frame2, bit3: Frame3)
```

Eclipse

When designing the housing, refer to the dimensional allowance as shown in the figure below.

Spectral Sensitivity Characteristics

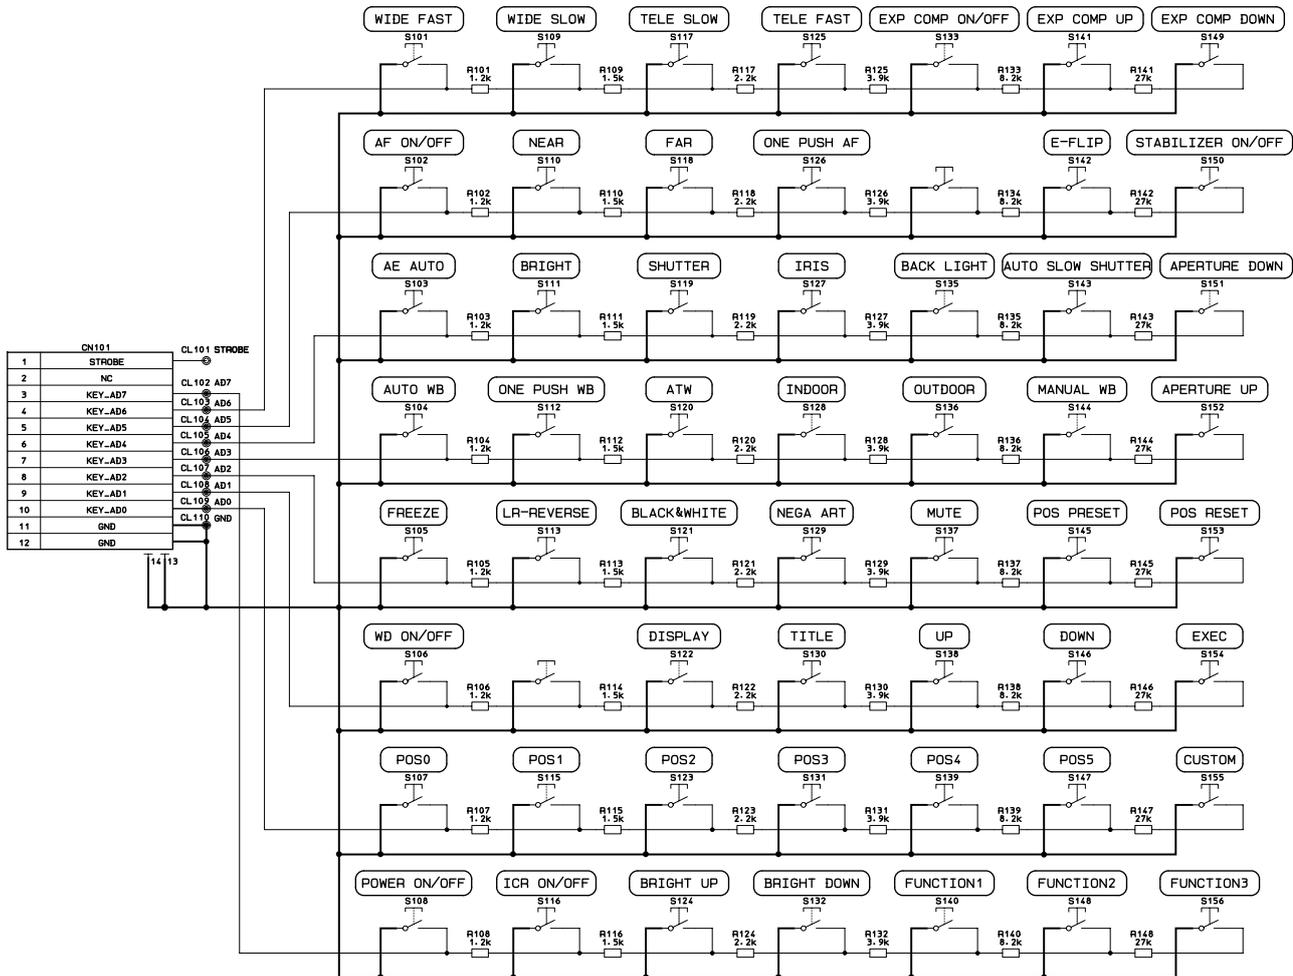

Use the graph as a reference value. (We can not guarantee these values.)

This data is measured when the IR cut filter is removed and the characteristics of the lens and optical source characteristics are ignored.

Key Switch Circuitry

The circuitry shown below is an example. Note that all switches in the figure do not function in all models. For more information, refer to the command list, check functions on the camera, or contact your Sony dealer.

The CN101 is connected to the FCB camera main unit.

Key Function Specifications

Classification	Name	Function	Button operation	Mode display
ZOOM	WIDE FAST	Move ZOOM to WIDE side quickly.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
	WIDE SLOW	Move ZOOM to WIDE side slowly.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
	TELE FAST	Move ZOOM to TELE side quickly.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
	TELE SLOW	Move ZOOM to TELE side slowly.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
FOCUS	AF ON/OFF	Switch between Auto Focus and Manual Focus.	Switch between Auto and Manual.	Manual F indication
	NEAR	Move focus to NEAR side in Manual Focus mode.	Pressing repeatedly allowed.	Near indication
	FAR	Move focus to FAR side in Manual Focus mode.	Pressing repeatedly allowed.	Far indication
	ONE PUSH AF	Perform AF operation once in Manual Focus mode.	Request One Push AF.	Manual F indication flashes while request is made.
AE	AE AUTO	Switch to AE FULL Auto mode.	Request AE Full Auto.	No display
	BRIGHT	Switch to variable brightness mode (BRIGHT), depending on the conditions for mode shifting.	Request Bright mode. Pressing Up/Down key repeatedly allowed.	Bright bar display
	SHUTTER	Shutter priority AE mode	Request shutter priority AE mode. Pressing Up/Down key repeatedly allowed.	Shutter code display
	IRIS	Iris priority AE mode	Request iris priority AE mode. Pressing Up/Down key repeatedly allowed.	Iris code display
	BACK LIGHT	Switch backlight on/off in AE FULL Auto mode.	Switch on/off.	Backlight indication
	EXP COMP ON/OFF	Switch the exposure compensation function ON/OFF.	Switch on/off.	Exposure compensation code display
	EXP COMP UP	Increase the exposure compensation (UP). (Used during exposure compensation mode. 1.5 dB increments.)	Request UP/pressing repeatedly allowed.	Exposure compensation code display
	EXP COMP DOWN	Decrease the exposure compensation (DOWN). (Used during exposure compensation mode. 1.5 dB increments.)	Request DOWN/pressing repeatedly allowed.	Exposure compensation code display
WD	WD ON/OFF	Switch the Wide Dynamic Range mode ON/OFF	Switch on/off.	WDR character display
WB	AUTO WB	Switch to AUTO WB mode.	Request Auto WB mode.	No display
	ONE PUSH WB	Switch to One Push WB mode when pressed once and capture data when pressed 2nd time.	Request One Push WB mode and trigger.	One Push indication flashes at 0.8 Hz before capturing data, at 3.2 Hz during capturing, and lights after capturing.
	ATW	Switch to ATW mode.	Request ATW mode.	ATW display
	INDOOR	Enable WB at 3200K in INDOOR mode.	Request Indoor mode.	Indoor indication
	OUTDOOR	Enable WB at 5800K in OUTDOOR mode.	Request Outdoor mode.	Outdoor indication
	MANUAL WB	Switch to Manual WB mode. Enable R control when pressed once and enable B control when pressed 2nd time. Switchable with UP/DOWN key.	Switch between R control and B control in manual WB mode. Pressing Up/Down key repeatedly allowed.	“WB-MAN” (character display)

Classification	Name	Function	Button operation	Mode display
FEATURE	FREEZE	Capture still image.	Switch on/off.	CAPTURE indication
	LR REVERSE	Horizontal reversal	Switch on/off.	Horizontal reversal indication
	E-FLIP	Turn upside down	Switch on/off.	Turn upside down mark
	BLACK & WHITE	Black-and-white output	Switch on/off.	B&W display
	NEGA ART	Negative art output	Switch on/off.	Neg Art display
	MUTE	Muting video output	Switch on/off.	No display
DISPLAY	DISPLAY	Display	Switch on/off.	Display/no display
	TITLE	Title setting	Request setting. → Setting is started with Exec. Pressing Up/Down key repeatedly allowed.	Title setting screen display
	EXEC	Confirm title setting.	Select with Up/Down and confirm with Exec.	Sets screen selection and displays it in yellow.
UP/DOWN	UP	Data UP key (priority for AE mode, Bright, manual WB, title, and clock)	Request UP.	Selection highlighted. reversal
	DOWN	Data DOWN key (priority for AE mode, Bright, manual WB, title, and clock)	Request DOWN.	Selection highlighted. reversal
PRESET	POS0	Recall preset position 0.	Request recall.	RECALL POS0
	POS1	Recall preset position 1.	Request recall.	RECALL POS1
	POS2	Recall preset position 2.	Request recall.	RECALL POS2
	POS3	Recall preset position 3.	Request recall.	RECALL POS3
	POS4	Recall preset position 4.	Request recall.	RECALL POS4
	POS5	Recall preset position 5.	Request recall.	RECALL POS5
	CUSTOM	Recall custom preset.	Request recall.	RECALL
	POS PRESET	Write data. Enabled when pressed together with POS button.	Request setting. Enabled when pressed together with POS key.	PRESET display
POS RESET	Delete data. Enabled when pressed together with POS button.	Request deletion. Enabled when pressed together with POS key.	RESET display	
Others	APERTURE UP	Increase aperture (Aperture UP)	Request UP.	Aperture bar displayed for 3 s.
	APERTURE DOWN	Decrease aperture (Aperture DOWN)	Request DOWN.	Aperture bar displayed for 3 s.
	BRIGHT UP	Raise brightness setting (Bright UP) (When not in Bright mode, switching to Bright mode is made automatically depending on the conditions.)	Request UP./Pressing repeatedly allowed.	Bright bar display
	BRIGHT DOWN	Lower brightness setting (Bright DOWN) (When not in Bright mode, switching to Bright mode is made automatically depending on the conditions.)	Request DOWN./Pressing repeatedly allowed.	Bright bar display
	AUTO SLOW SHUTTER	Switch Auto Slow Shutter on/off.	Switch on/off.	“ASS” (character display)
	ICR ON/OFF	Switch ICR mode on/off	Switch on/off.	ICR indication
	STABILIZER ON/OFF	Switch the Image Stabilizer function ON/OFF.	Switch on/off.	Image Stabilizer “OFF” mark
	POWER ON/OFF	Switch the POWER (Standby) ON/OFF.	Switch on/off.	–
FUNCTION	FUNCTION1	–	–	–
	FUNCTION2	–	–	–

Initial Settings, Custom Preset and Backup

Initial settings for the various functions of the FCB camera are indicated in the “Initial settings” column. The “Custom preset” column indicates whether the custom preset function can be used to store the settings. The function enables the stored settings to be recalled automatically when the camera is turned on. The “Back up at standby” column indicates whether the data is preserved even when the camera is powered OFF.

Mode/Position setting	Initial settings	Custom preset	Back up at standby

Command List

VISCA¹⁾/RS-232C Commands

This Manual outlines an RS-232 control protocol and command list for certain Sony cameras from which control software can be developed.

THIS CONTROL PROTOCOL AND COMMAND LIST IS PROVIDED BY SONY ON AN "AS-IS BASIS" WITHOUT WARRANTY OF ANY KIND. SONY DOES NOT WARRANT ANY PARTICULAR RESULT FROM THE USE OF THIS CONTROL PROTOCOL AND COMMAND LIST AND DISCLAIMS AND EXCLUDES ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THAT CONTROL PROTOCOL AND COMMAND LIST, INCLUDING, BUT NOT LIMITED TO, ANY OR ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN FACT, SONY SPECIFICALLY ACKNOWLEDGES THAT SOFTWARE DEVELOPED BASED ON THIS CONTROL PROTOCOL AND COMMAND LIST MAY CAUSE MALFUNCTION OR DAMAGE TO HARDWARE AND SOFTWARE USED WITH IT (INCLUDING SONY HARDWARE AND SOFTWARE) AND SPECIFICALLY DISCLAIMS ANY LIABILITY FOR ANY SUCH MALFUNCTION OR DAMAGE. THIS CONTROL PROTOCOL AND COMMAND LIST SHOULD BE USED WITH CAUTION.

Overview of VISCA

In VISCA, the device outputting commands, for example, a computer, is called the controller. The device receiving the commands, an FCB camera is called the peripheral device. In VISCA, up to seven peripheral devices like the FCB camera can be connected to one controller using communication conforming to the RS-232C standard. The parameters of RS-232C are as follows.

- Communication speed: 9.6 kbps/19.2 kbps/38.4 kbps
- Data bits : 8
- Start bit : 1
- Stop bit : 1
- Non parity

Flow control using XON/XOFF and RTS/CTS, etc., is not supported.

1) VISCA is a protocol which controls consumer camcorders developed by Sony. "VISCA" is a trademark of Sony Corporation.

VISCA Communication Specifications

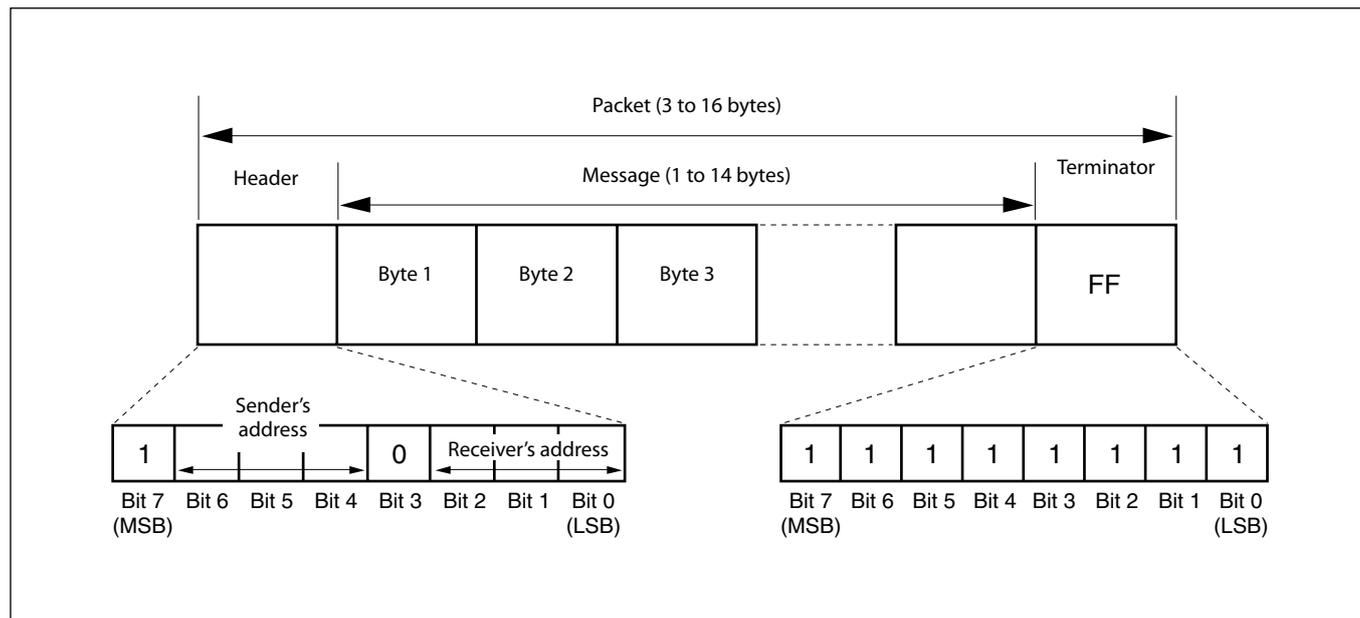

VISCA packet structure

The basic unit of VISCA communication is called a packet. The first byte of the packet is called the header and comprises the sender's and receiver's addresses. For example, the header of the packet sent to the FCB camera assigned address 1 from the controller (address 0) is hexadecimal 81H. The packet sent to the camera

assigned address 2 is 82H. In the command list, as the header is 8X, input the address of the camera at X. The header of the reply packet from the camera assigned address 1 is 90H. The packet from the camera assigned address 2 is A0H.

Some of the commands for setting cameras can be sent to all devices at one time (broadcast). In the case of broadcast, the header should be hexadecimal 88H.

When the terminator is FFH, it signifies the end of the packet.

Command and inquiry

● Command

Sends operational commands to the FCB camera.

● Inquiry

Used for inquiring about the current state of the FCB camera.

	Command Packet	Note
Inquiry	8X QQ RR ... FF	QQ ¹⁾ = Command/Inquiry, RR ²⁾ = category code

¹⁾ QQ = 01 (Command), 09 (Inquiry)

²⁾ RR = 00 (Interface), 04 (camera 1), 06 (Pan/Tilter), 07 (camera 2)

X = 1 to 7: FCB camera address

Responses for commands and inquiries

● Acknowledge message

Returned by the FCB camera when it receives a command. No Acknowledge message is returned for inquiries.

● Completion message

Returned by the FCB camera when execution of commands or inquiries is completed. In the case of inquiry commands, it will contain reply data for the inquiry after the 3rd byte of the packet. If the Acknowledge message is omitted, the socket number will contain 0.

	Reply Packet	Note
Acknowledge	X0 4Y FF	Y = socket number
Completion (commands)	X0 5Y FF	Y = socket number
Completion (Inquiries)	X0 5Y ... FF	Y = socket number

X = 9 to F: FCB camera address + 8

● Error message

When a command or inquiry command could not be executed or failed, an error message is returned instead of the completion message.

Error Packet	Description
X0 6Y 01 FF	Message length error (>14 bytes)
X0 6Y 02 FF	Syntax Error
X0 6Y 03 FF	Command buffer full
X0 6Y 04 FF	Command cancelled
X0 6Y 05 FF	No socket (to be cancelled)
X0 6Y 41 FF	Command not executable

X = 9 to F: FCB camera address + 8, Y = socket number

Socket number

When command messages are sent to the FCB camera, it is normal to send the next command message after waiting for the completion message or error message to return. However to deal with advanced uses, the FCB camera has two buffers (memories) for commands, so that up to two commands including the commands currently being executed can be received. When the FCB camera receives commands, it notifies the sender which command buffer was used using the socket number of the Acknowledge message. As the completion message or error message also has a socket number, it indicates which command has ended. Even when two command buffers are being used at any one time, an FCB camera management command and some inquiry messages can be executed.

The Acknowledge message is not returned for these commands and inquiries, and only the completion message of socket number 0 is returned.

Command execution cancel

To cancel a command which has already been sent, send the Cancel command as the next command. To cancel one of any two commands which have been sent, use the cancel message.

	Cancel Packet	Note
Cancel	8X 2Y FF	Y = socket number

X = 1 to 7: FCB camera address, Y = socket number

An error message will be returned for this command, but this is not a fault. It indicates that the command has been canceled.

VISCA Device Setting Command

Before starting control of the FCB camera, be sure to send the Address command and the IF_Clear command using the broadcast function.

For VISCA network administration

- **Address**

Sets an address of a peripheral device. Use when initializing the network, and receiving the following network change message.

- **Network Change**

Sent from the peripheral device to the controller when a device is removed from or added to the network. The address must be re-set when this message is received.

	Packet	Note
Address	88 30 01 FF	Always broadcasted.
Network Change	X0 38 FF	

X = 9 to F: FCB camera address + 8

VISCA interface command

- **IF_Clear**

Clears the command buffers in the FCB camera and cancels the command currently being executed.

Command Packet	Reply Packet	Note
IF_Clear	8X 01 00 01FF	X0 50 FF
IF_Clear (broadcast)	88 01 00 01 FF	88 01 00 01 FF

X = 1 to 7: FCB camera board address (For inquiry packet)
X = 9 to F: FCB camera board address +8 (For reply packet)

VISCA interface and inquiry

- **CAM_VersionInq**

Returns information on the VISCA interface.

Inquiry	Inquiry Packet	Reply Packet	Description
CAM_VersionInq	8X 09 00 02 FF	Y0 50 GG GG HH HH JJ JJ KK FF	GGGG = Vender ID (0020: Sony) HHHH = Model ID 0479: FCB-EX2400 047A: FCB-EX2400P JJJJ = ROM revision KK = Maximum socket #(02)

X = 1 to 7: FCB camera address (For inquiry packet)

X = 9 to F: FCB camera address +8 (For reply packet)

VISCA Command/Acknowledge Protocol

Command	Command Message	Reply Message	Comments
General Command	81 01 04 38 02 FF (Example)	90 41 FF (Acknowledge)+90 51 FF (Completion) 90 42 FF 90 52 FF	Returns Acknowledge when a command has been accepted, and Completion when a command has been executed.
	81 01 04 38 FF (Example)	90 60 02 FF (Syntax Error)	Accepted a command which is not supported or a command lacking parameters.
	81 01 04 38 02 FF (Example)	90 60 03 FF (Command Buffer Full)	There are two commands currently being executed, and the command could not be accepted.
	81 01 04 08 02 FF (Example)	90 61 41 FF (Command Not Executable) 90 62 41 FF	Could not execute the command in the current mode.
Inquiry Command	81 09 04 38 FF (Example)	90 50 02 FF (Completion)	Acknowledge is not returned for the inquiry command.
	81 09 05 38 FF (Example)	90 60 02 FF (Syntax Error)	Accepted a command which is not supported.
Address Set	88 30 01 FF	88 30 02 FF	Returned the device address to +1.
IF_Clear(Broadcast)	88 01 00 01 FF	88 01 00 01 FF	Returned the same command.
IF_Clear (For x)	8x 01 00 01 FF	z0 50 FF (Completion)	Acknowledge is not returned for this command.
Command Cancel	8x 2y FF	z0 6y 04 FF (Command Canceled)	Returned when the command of the socket specified is canceled. Completion for the command canceled is not returned.
		z0 6y 05 FF (No Socket)	Returned when the command of the specified socket has already been completed or when the socket number specified is wrong.

VISCA Camera-Issued Messages

Acknowledge/Completion Messages

	Command Messages	Comments
Acknowledge	z0 4y FF (y:Socket No.)	Returned when the command is accepted.
Completion	z0 5y FF (y:Socket No.)	Returned when the command has been executed.

z = Device address + 8

Error Messages

	Command Messages	Comments
Syntax Error	z0 60 02 FF	Returned when the command format is different or when a command with illegal command parameters is accepted.
Command Buffer Full	z0 60 03 FF	Indicates that two sockets are already being used (executing two commands) and the command could not be accepted when received.
Command Canceled	z0 6y 04 FF (y:Socket No.)	Returned when a command which is being executed in a socket specified by the cancel command is canceled. The completion message for the command which is being executed is not returned.
No Socket	z0 6y 05 FF (y:Socket No.)	Returned when no command is executed in a socket specified by the cancel command, or when an invalid socket number is specified.
Command Not Executable	z0 6y 41 FF (y:Socket No.)	Returned when a command cannot be executed due to current conditions. For example, when commands controlling the focus manually are received during auto focus.

Network Change Message

	Command Messages	Comments
Network Change	z0 38 FF	Issued when power is being routed.

Temperature Reading Conversion Value (Reference Value)

Reading Value pq (hex)	Temperature Conversion Value (°C)
00	-3 to +3
0A	7 to 13
14	17 to 23
1E	27 to 33
28	37 to 43
32	47 to 53
3C	57 to 63

Register Setting

When changing the mode, turn the power of the unit off and on again to confirm the mode.

	Register No.	Value	
VISCA Baud Rate	00	00 (Initial setting)	9600 bps
		01	19200 bps
		02	38400 bps
OSD Language	60	00 (Initial setting)	English
		03	Chinese
CCD Scanning Mode	72	00 (Initial setting)	Interlaced
		01	Progressive
Digital Output Mode *Enabled when the CCD Scanning Mode is Progressive.	73	00 (Initial setting)	72MHz 60p/50p (Two fields in the same mode)
		01	72MHz 60p/50p
		04	36MHz 30p/25p (Stop analog output)
Zoom Limit	50	00 to FF (Initial setting: 00)	Wide Limit (0: Disabled)
	51	00 to FF (Initial setting: 00)	Tele Limit (0: Disabled)
E-Zoom Max	52	00 to FF (Initial setting: EB)	Max. digital zoom ratio = 256 ÷ (256-Value)
StableZoom	53	00 (Initial setting)	OFF
		01	ON
FocusTrace @ZoomDirect	54	00	OFF
		01 (Initial setting)	ON
FocusOffset @DomeCover	55	00 to FF (Initial setting: 00)	00: None to FF: Max.

Specifications

FCB-EX2400/P

Picture elements FCB-EX2400: Approx. 480K pixels
FCB-EX2400P: Approx. 570K pixels

Horizontal resolution
670 TV lines (WIDE end, Typical value)

Lens
28× zoom
F= 3.5 mm (WIDE) to 98.0 mm (TELE), F1.35 to F3.7

Zoom movement speed (NTSC)
Optical WIDE/Optical TELE
2.5 sec (Focus Tracking ON)
1.7 sec (Focus Tracking OFF)

Optical WIDE/Digital TELE
4.5 sec (Focus Tracking ON)
1.7 sec (Focus Tracking OFF)

Digital WIDE/Digital TELE
2.0 sec
(PAL)

Optical WIDE/Optical TELE
2.5 sec (Focus Tracking ON)
1.7 sec (Focus Tracking OFF)

Optical WIDE/Digital TELE
4.9 sec (Focus Tracking ON)
1.7 sec (Focus Tracking OFF)

Digital WIDE/Digital TELE
2.5 sec

Focus Movement time
∞ to Near
0.7 sec

Digital zoom 12× (336× with optical zoom)

Angle of view (H)
Approx. 55.8 degree (WIDE end) to
Approx. 2.1 degree (TELE end)

Min. working distance
10 mm (WIDE end), 1500 mm (TELE end)

Sync system Internal/External (V-Lock)

Min. illumination (F1.35, 50 IRE) 0.4 lx/1/60 sec (NTSC), 1/50 sec (PAL) (Typical value)

0.03 lx/1/4 sec (NTSC), 1/3 sec (PAL) (Typical value)
ICR-ON Mode
0.01 lx/1/4 sec (NTSC),
1/3 sec (PAL) (Typical value)

Recommended illumination

100 lx to 100,000 lx

S/N ratio 50 dB (Weight ON)

Back light compensation
ON/OFF

Electronic shutter speed
1/1 sec to 1/10000 sec (22 steps)

White balance AUTO, ATW, Indoor, Outdoor, One Push WB, Manual WB, Outdoor Auto, Sodium Vapor Lamp (Fix/Auto)

Gain Auto/Manual
(-3 to +28, 16 steps)
Max. Gain Limit
(6 to 28, 12 steps)

Wide dynamic range
WD Mode/VE Mode/OFF

3D noise reduction
ON/OFF (level 5 to 1 / OFF, 6 steps)

Image Stabilizer ON/OFF/HOLD

Defog mode On/Off

Color Enhancement
ON/OFF

Aperture control 16 steps

Preset 6-POSITIONS

Serial interface VISCA protocol (CMOS 5V)
9.6 Kbps, 19.2 Kbps, 38.4 Kbps, Stop bit, 1 bit

Video Output VBS: 1.0 Vp-p (Sync negative), Y/C Output
Digital (ITU-R BT656 equiv.)
Progressive/Interlace

Storage temperature/Humidity
-20 °C to +60 °C (-4 °F to +140 °F)/20% to 95%
Absolute humidity: 36 g/m³

Operating temperature/Humidity
-5 °C to +60 °C (23 °F to +140 °F)/20% to 80%
Absolute humidity: 36 g/m³

Power requirements/Power consumption
6 V to 12 V DC/2.4 W (during motor operation: 3.2 W)

Mass Approx. 245 g (8.6 oz.)

Dimensions $50.0 \times 57.5 \times 89.8$ mm
($2 \times 2 \frac{3}{8} \times 3 \frac{5}{8}$ in.) (w/h/d)

Design and specifications are subject to change without notice.

Digital Output Function

Operation Mode	Digital Output (ITU-R BT656 equiv.)
Interlace	60i/50i, clock rate: 36 MHz
Interlace WD	
Progressive	60p/50p, clock rate: 72 MHz
	60p/50p (30p/25p \times 2), clock rate: 72 MHz
	30p/25p, clock rate: 36 MHz
Progressive WD	60p/50p (30p/25p \times 2), clock rate: 72 MHz

Slow shutter is not available in the Interlace WD or Progressive WD mode.

(Precaution when using digital output)

Image noise may occur when using digital output.

Take measures against the noise such as shielding FFC to be connected and attaching a ferrite core or an electromagnetic suppression sheet to FFC as needed. The recommended maximum FFC length is 100 mm or less. Also, firmly ground and connect the frame so as not to cause the ground potential difference with the connection destination. Noise may occur due to the ground potential difference.
