Features

- The CCD features 630,000 (NTSC) or 740,000 (PAL) effective picture elements and an image stabilizer for stable shooting with high-resolution. (only for FCB-EX980S/EX980SP)
- The EX-view HAD™ CCD features 380,000 (NTSC) or 440,000 (PAL) effective picture elements and high-sensitivity shooting. The minimum illumination required is 1.0 lux ($1/60$ s (NTSC), $1/50$ s (PAL), ICR OFF). (only for FCB-EX980/980P)
- 26× optical zoom
- Supports external synchronization (V-lock).
- Adopts newly developed DSP for improved picture quality when using the digital zoom or the slow shutter.
- An infrared (IR) Cut-Filter can be disengaged from the image path for increased sensitivity in low light environments. The ICR will automatically engage depending on the ambient light, allowing the camera to be effective in day/night environment.
- VISCA is a communications protocol, which enables the camera to be controlled remotely from a host computer/controller.
- Six memory locations are provided to temporally save and recall up to six sets of camera settings.
- Enhanced privacy zone masking (max. 24 blocks)
- E-FLIP function
- Alarm function

With consideration given environmental protection, this module is designed to operate with low power consumption and also incorporates lead-free and halogen-free circuit boards.

Precautions

Software

Use of the demonstration software developed by Sony Corporation or use of the software with customer developed application software may damage hardware, the application program or the camera. Sony Corporation is not liable for any damages under these conditions.

Operation

Start the camera control software on your computer after you turn on the camera and the image is displayed.

Operation and storage locations

Do not shoot images that are extremely bright (e.g., light sources, the sun, etc.) for long periods of time. Do not use or store the camera in the following extreme conditions:

- Extremely hot or cold places (operating temperature 0 °C to +50 °C (32 °F to 122 °F))
- Close to generators of powerful electromagnetic radiation such as radio or TV transmitters
- Where it is subject to fluorescent light reflections
- Where it is subject to unstable (flickering, etc.) lighting conditions
- Where it is subject to strong vibration

Care of the unit

Remove dust or dirt on the surface of the lens with a blower (commercially available).

Other

Do not apply excessive voltage. (Use only the specified voltage.) Otherwise, you may get an electric shock or a fire may occur.

In case of abnormal operation, contact your authorized Sony dealer or the store where you purchased the product.

Locations of Controls

Main Unit

- 1 Lens
- 2 CN902 jack
- 3 CN901 jack

- 4 CN601 jack (for key SW)
- 5 TELE button
- 6 WIDE button

- 7 Tripod screw holes
When a tripod is used, please use 7 mm ($\frac{9}{32}$ in.) or less screws to attach it to the camera. Also, please be sure to attach the tripod securely.

Basic Functions

Overview of Functions

VISCA commands are the basis of camera control.

Timing Chart

As VISCA Command processing can only be carried out one time in a Vertical cycle, it takes the maximum 1V cycle time for an ACK/Completion to be returned. If the Command ACK/Completion communication time can be cut shorter than the 1V cycle time, then every 1V cycle can receive a Command.

In general

- **Power On/Off**

Powers the camera on and off. When the power is off, the camera is able to accept only the lowest level of VISCA Commands; the display and other features are turned off.

- **I/F clear**

Clears the Command buffer of the FCB camera. Clearing the buffer can also be carried out from the control application software when the power is on.

- **Address set**

VISCA is a protocol, which normally can support a daisy chain of up to seven attached devices. However, the FCB camera does not support connection of cameras in a daisy chain. Therefore, whenever a camera is connected for the first time, be sure to use the address set to confirm the address.

- **ID Write**

Sets the camera ID.

- **Mute**

Blanks the screen and sends out a synchronizing signal.

- **Lens Initialize**

Initializes the zoom and focus of the lens. Even when power is already on, it initializes the zoom and the focus.

- **Comp Scan**

A pixel blemish-masking feature, which can be made to reevaluate overall CCD pixel blemishes and mask severely flawed pixels automatically upon receiving the COMP SCAN command. This feature helps to mask the flaws found in CCD imagers, even after the camera has been powered on for some time.

Zoom

The FCB-EX980S/EX980SP/EX980/EX980P employs a 26× optical zoom lens combined with a digital zoom function; this camera allows you to zoom up to 312×.

- **Optical 26×, f = 3.5 to 91 mm (F 1.6 to F 3.8)**

The horizontal angle of view is approximately 54.2 degrees (wide end) to 2.2 degrees (tele end). Digital Zoom enlarges the center of the subject by expanding each image in both the vertical and horizontal directions. When 312× zoom is used, the number of effective picture elements in each direction reduces to $\frac{1}{12}$ and the overall resolution deteriorates.

You can activate the zoom in the following two ways

- **By pressing the TELE or WIDE buttons on the camera itself**

- **Using a VISCA Command**

- **Using Standard Mode**

- **Using Variable Mode**

There are eight levels of zoom speed.

- **Direct Mode**

Setting the zoom position enables quick movement to the designated position.

- **Digital Zoom ON/OFF**

In these standard and variable Speed Modes, it is necessary to send Stop Command to stop the zoom operation.

- **The Zoom Mode supports a Combined Mode and a Separate Mode.**

- **Combined Mode**

This is the previously existing zoom method. After the optical zoom has reached its maximum level, the camera switches to Digital Zoom Mode.

- **Separate Mode**

In this mode, Optical Zoom and Digital Zoom can be operated separately. You can use digital zoom magnification at any time from within any level of optical magnification.

Focus

Focus has the following modes, all of which can be set using VISCA Commands.

- **Auto Focus Mode**

The minimum focus distance is 320 mm at the optical wide end and 1500 mm at the optical tele end, and is independent of the digital zoom.

The AutoFocus (AF) function automatically adjusts the focus position to maximise the high frequency content of the picture in a center measurement area, taking into consideration the high luminance and strong contrast components.

- **- Normal AF Mode**

This is the normal mode for AF operations.

- **- Interval AF Mode**

The mode used for AF movements carried out at particular intervals. The time intervals for AF movements and for the timing of the stops can be set in one-second increments using the Set Time Command. The initial value for both is set to five seconds.

- **- Zoom Trigger Mode**

When the zoom is changed with the TELE or the WIDE buttons, the pre-set value (initially set at 5 seconds) becomes that for AF Mode. Then, it stops.

AF sensitivity can be set to either Normal or LOW.

- **- Normal**

Reaches the highest focus speed quickly. Use this when shooting a subject that moves frequently. Usually, this is the most appropriate mode.

- **- LOW**

Improves the stability of the focus. When the lighting level is low, the AF function does not take effect, even though the brightness varies, contributing to a stable image.

- **Manual Focus Mode**

Manual Focus has both a Standard Speed Mode and a Variable Speed Mode. Standard Speed Mode focuses at a fixed rate of speed. Variable Speed Mode has eight speed levels that can be set using a VISCA Command.

In these standard and variable Speed Modes, it is necessary to send Stop Command to stop the zoom operation.

- **One Push Trigger Mode**

When a Trigger Command is sent, the lens moves to adjust the focus for the subject. The focus lens then holds that position until the next Trigger Command is input.

- **Infinity Mode**

The lens is forcibly moved to a position suitable for an unlimited distance.

- **Near Limit Mode**

Can be set in a range from 1000 (∞) to C000 (10 mm).

White Balance

White Balance has the following modes, all of which can be set using VISCA Commands.

- **Auto White Balance**

This mode computes the white balance value output using color information from the entire screen. It outputs the proper value using the color temperature radiating from a black subject based on a range of values from 3000 to 7500K.

This mode is the factory setting.

- **ATW**

Auto Tracing White balance (2000 to 10000 K)

- **Indoor**

3200 K Base Mode

- **Outdoor**

5800 K Base Mode

- **One Push WB**

The One Push White Balance mode is a fixed white balance mode that may be automatically readjusted only at the request of the user (One Push Trigger), assuming that a white subject, in correct lighting conditions, and occupying more than 1/2 of the image, is submitted to the camera.

One Push White Balance data is lost when the power is turned off. If the power is turned off, reset One Push White Balance.

- **Manual WB**

Manual control of R and B gain, 256 steps each

Automatic Exposure Mode

A variety of AE functions are available for optimal output of subjects in lighting conditions that range from low to high.

- **Full Auto**

Auto Iris and Gain, Fixed Shutter Speed (NTSC: 1/60 sec., PAL: 1/50 sec.)

- **Shutter Priority**¹⁾

Variable Shutter Speed, Auto Iris and Gain (1/1 to 1/10,000 sec., 22 steps, std. shutter: 16 steps, slow shutter: 6 steps)

1) Flicker can be eliminated by setting shutter to

→ 1/100s for NTSC models used in countries with a 50 Hz power supply frequency

→ 1/120s for PAL models used in countries with a 60 Hz power supply frequency

- **Iris Priority**

Variable Iris (F1.6 to Close, 18 steps), Auto Gain and Shutter speed

- **Manual**

Variable Shutter, Iris and Gain

- **Bright**

Variable Iris and Gain (Close to F1.6, 17 steps at 0 dB: F1.6, 15 steps from 0 to 28 dB)

AE – Shutter priority

The shutter speed can be set freely by the user to a total of 22 steps – 16 high speeds and 6 low speeds. When the slow shutter is set, the speed can be 1/30s, 1/15s, 1/8s, 1/4s, 1/2s, 1/1s. The picture output is read at a normal rate from the memory. The memory is updated at a low rate from the CCD. AF capability is low. In high speed mode, the shutter speed can be set up to 1/10,000s. The iris and gain are set automatically, according to the brightness of the subject.

Data	NTSC	PAL
15	10000	10000
14	6000	6000
13	4000	3500
12	3000	2500
11	2000	1750
10	1500	1250
0F	1000	1000
0E	725	600
0D	500	425
0C	350	300
0B	250	215
0A	180	150
09	125	120
08	100	100
07	90	75
06	60	50
05	30	25
04	15	12
03	8	6
02	4	3
01	2	2
00	1	1

AE – Iris priority

The iris can be set freely by the user to 18 steps between F1.6 and Close.

The gain and shutter speed are set automatically, according to the brightness of the subject.

Data	Setting value	Data	Setting value
11	F1.6	08	F8
10	F2	07	F9.6
0F	F2.4	06	F11
0E	F2.8	05	F14
0D	F3.4	04	F16
0C	F4	03	F19
0B	F4.8	02	F22
0A	F5.6	01	F28
09	F6.8	00	CLOSE

AE – Manual

The shutter speed (22 steps), iris (18 steps) and gain (16 steps) can be set freely by the user.

AE – Bright

The bright control function adjusts both gain and iris using an internal algorithm, according to a brightness level freely set by the user. Exposure is controlled by gain when dark, and by iris when bright.

As both gain and iris are fixed, this mode is used when exposing at a fixed camera sensitivity. When switching from Full Auto or Shutter Priority Mode to Bright Mode, the current status will be retained for a short period of time.

Only when the AE mode is set to “Full Auto” or “Shutter Priority,” can you switch it to “Bright.”

Data	Iris	Gain	Data	Iris	Gain
1F	F1.6	28 dB	0F	F2.4	0 dB
1E	F1.6	26 dB	0E	F2.8	0 dB
1D	F1.6	24 dB	0D	F3.4	0 dB
1C	F1.6	22 dB	0C	F4	0 dB
1B	F1.6	20 dB	0B	F4.8	0 dB
1A	F1.6	18 dB	0A	F5.6	0 dB
19	F1.6	16 dB	09	F6.8	0 dB
18	F1.6	14 dB	08	F8	0 dB
17	F1.6	12 dB	07	F9.6	0 dB
16	F1.6	10 dB	06	F11	0 dB
15	F1.6	8 dB	05	F14	0 dB
14	F1.6	6 dB	04	F16	0 dB
13	F1.6	4 dB	03	F19	0 dB
12	F1.6	2 dB	02	F22	0 dB
11	F1.6	0 dB	01	F28	0 dB
10	F2	0 dB	00	CLOSE	0 dB

When switching from the Shutter Priority mode to the Bright mode, the shutter speed set in the Shutter Priority mode is maintained.

Spot Exposure Mode

In Full Auto AE, the level for the entire screen is computed and the optimum Auto Iris and Gain levels are determined. In Spot AE, a particular section of the subject can be designated, and then that portion of the image can be weighted and a value computed so that Iris and Gain can be optimized to obtain an image. For example, in an image with a lot of movement and with varying levels of brightness, portions without much change can be designated as such a “spot,” and changes to the screen can be minimized in that area. As shown in the diagram below, a range of 16 blocks vertically and 16 blocks horizontally can be designated.

In the case where the center is designated (shown in black), the level is computed along with a weighted value for the surrounding block (shaded), including the specified portions; and then the Gain and Iris are set. The value of the designated portions and the surrounding areas should be calculated as 90%, the rest should be set to 10%. The range of the Spot AE frame is fixed to 5 blocks vertically and 4 blocks horizontally.

Exposure Compensation

Exposure compensation is a function which offsets the internal reference brightness level used in the AE mode, by steps of 1.5 dB.

Data	Step	Setting value
0E	7	10.5 dB
0D	6	9 dB
0C	5	7.5 dB
0B	4	6 dB
0A	3	4.5 dB
09	2	3 dB
08	1	1.5 dB
07	0	0 dB
06	-1	-1.5 dB
05	-2	-3 dB
04	-3	-4.5 dB
03	-4	-6 dB
02	-5	-7.5 dB
01	-6	-9 dB
00	-7	-10.5 dB

Aperture Control

Aperture control is a function which adjusts the enhancement of the edges of objects in the picture. There are 16 levels of adjustment, starting from “no enhancement.” When shooting text, this control may help by making them sharper.

Back Light Compensation

When the background of the subject is too bright, or when the subject is too dark due to shooting in the AE mode, back light compensation will make the subject appear clearer.

Slow shutter – Auto/Manual

When set to “Auto,” ensures that the slow shutter is set automatically when the brightness drops. Effective only when the AE mode is set to “Full Auto.” Set to “Slow Shutter Manual” at shipment.

ICR (IR Cut-Removable) Mode

An infrared (IR) Cut-Filter can be disengaged from the image path for increased sensitivity in low light environments. The ICR will automatically engage depending on the ambient light, allowing the camera to be effective in day/night environments. When the ICR Cut-Filter is ON, the image becomes black and white.

Auto ICR Mode

Auto ICR Mode automatically switches the settings needed for attaching or removing the IR Cut Filter. With a set level of darkness, the IR Cut Filter is automatically disabled (ICR ON), and the infrared sensitivity is increased. With a set level of brightness, the IR Cut Filter is automatically enabled (ICR OFF). Also, on systems equipped with an IR light, the internal data of the camera is used to make the proper decisions to avoid malfunctions.

Note

When in Auto_ICR_OFF state and WB data is added (default), a malfunction may occur when the subjects largely consisting of blue and red colors are taken.

Camera ID

The ID can be set up to 65,536 (0000 to FFFF). As this will be memorized in the nonvolatile memory inside, data will be saved regardless of whether it has been backed up.

Effect

It consists of the following functions.

- **Neg. Art:** Negative/Positive Reversal
- **Black White:** Monochrome Image

Others

E-FLIP

This function turns the video output from the camera upside down.

Mirror image

This function reverses the video output from the camera horizontally.

Freeze

This function captures an image in the field memory of the camera so that this image can be output continuously.

Because communication inside the camera is based on V cycle, the captured image is always the one 3V to 4Vs after the sending of a Command. Thus, you can not specify a time period after sending EVEN, ODD or a Command.

The Image Stabilizer Function (FCB-EX980S/EX980SP only)

When the Image Stabilizer Function is ON, it helps in obtaining a stable image free of vibration caused by jarring movements. For a vibration frequency of around 10 Hz, correction is approximately 90%.

Note

Be advised that, when using systems equipped with Pan and Tilt functions, quick starts and stops are corrected for, causing a different movement from that of the normal image.

Memory (Position preset)

Using the position preset function, 6 sets of camera shooting conditions can be stored and recalled. This function allows you to achieve the desired status instantly, even without adjusting the following items each time.

- **Zoom Position**
- **Digital Zoom On/Off**
- **Focus Auto/Manual**
- **Focus Position**
- **AE Mode**
- **Shutter control parameters**
- **Bright Control**
- **Iris control parameters**
- **Gain control parameters**
- **Exposure Compensation On/Off**
- **Exposure Level**
- **Backlight Compensation On/Off**
- **Slow Shutter Auto/Manual**
- **White Balance Mode**
- **R/B Gain**
- **Aperture**
- **ICR Shoot On/Off**

Custom Preset

As with the position preset function, the camera shooting conditions can be stored and recalled. The settings are recalled when the power is turned on. *For setting items, see the “Initial Settings, Custom Preset and Backup” section on page 33.*

User Memory Area

A user area of 16 bytes allows you to write data, such as an ID for each customer, data for each system, and so on, freely.

Note

Rewriting of memory is not unlimited. Be careful to avoid using the memory area for such as unnecessary tasks as rewriting the contents of the memory for every operation.

Privacy Zone Settings

For details, see page 13.

Alarm

For details, see page 17.

Title Display

The camera can be given a title containing up to 20 characters such as “ENTRANCE” or “LOBBY”. The position of the first character (horizontal, vertical) of the title, blinking state, and color can also be changed.

Vposition	00 to 0A	
Hposition	00 to 17

Synchronization methods

Internal and external synchronization are available; VISCA Commands allow you to switch between them.

• Internal synchronization

An internal vibrator inside the camera generates a synchronizing signal as a basic oscillator.
 NTSC=28.636363MHz
 PAL=28.375MHz

• External synchronization (V-Lock Synchronization)

When a TTL level V-Lock pulse is input, the camera synchronizes to the input signal (V-lock synchronization). The frequency of the input signal synchronizes to within ± 1 Hz of the external synchronization.

Also, V-Phase phase adjustment can be carried out to within ± 90 degrees due to the V-Lock phase adjustment. In addition, 360 degree phase adjustment is possible because you can switch between 0 degree and 180 degree phases.

Because V-Lock synchronization is a simple synchronization method, color signals like a VBS “GenLock” cannot be synchronized.

Privacy Zone Masking Function

Privacy Zone masking protects private objects and areas such as house windows, entrances, and exits which are within the camera's range of vision but not subject to surveillance.

Privacy zone masking can be masked on the monitor to protect privacy.

Features

- Mask can be set on up to 24 places according to Pan/Tilt positions.
- Mask can be displayed on 8 places per screen simultaneously.
- Privacy Zones are displayed according to priority in alphabetical order.
- Individual on/off zone masking settings.
- Two colors from among 28 colors can be individually set for each of 24 privacy zones.
- Interlocking control with zooming.
- Interlocking control with Pan/Tilt.
- Set the masking moving speed.
- Non-interlocking control with Pan/Tilt.

Details of Setting Commands

Set Mask

Command: 8x 01 04 76 mm nn 0r 0r 0s 0s FF

Parameters:

mm	Setting Mask See “mm: mask setting list” in “Parameters” on page 15.
nn	Selects new setting or resetting for the zone. See nn: Setting” in “Parameters” on page 15.
rr	Sets the half value “w” of the Mask Width.
ss	Sets the half value “h” of the Mask Height. See “pp: x, qq: y, rr: w, ss: h” in “Parameters” on page 15.

Comments: To set the mask, first display the object at the center of the screen. When “nn” is set to 1, the current Pan/Tilt/Zoom position is recorded in internal memory.

When “nn” is set to 0, the Pan/Tilt/Zoom position in memory is not changed.

Notes

- The tilt angle at which you can set the mask is between -70 to +70 degrees.
- It is recommended that you set the size to at least twice the size of the object (height and width).

Set Display

Command: 8x 01 04 77 pp pp pp pp FF

Parameter:

pp pp pp pp	Each 24 Privacy Zones corresponds to 1 bit. See “pp pp pp pp: Mask bit” in “Parameters” on page 15.
-------------	--

Comments: Each of 24 Privacy zones can be switched on and off individually by a single VISCA command. If you want to display a Privacy zone, you must set its bit to 1. If you do not want to display a Privacy zone, you must set its bit to 0.

Set Mask Color

Command: 8x 01 04 78 pp pp pp pp qq rr FF

Parameter:

pp pp pp pp	Each 24 Privacy Zones correspond with the BIT. See “pp pp pp pp: Mask bit” in “Parameters” on page 15.
qq	Set the color code include the semi-transparency code.
rr	Set the color code include the semi-transparency code. See “qq, rr: Color code” in “Parameters” on page 15.

Comments: Two different color masks can be chosen.

The colors can be chosen from among 14 colors including the possibility for semi-transparency of each color. Therefore two colors from among the total of 28 colors can be individually set for each of 24 privacy zones.

If the bit of parameter (pp pp pp pp) is set to “0”, mask color will be “qq” color (Color code). If the bit of parameter (pp pp pp pp) is set to “1”, the mask color will be “rr” color (Color code).

Example: 8x 01 04 78 00 00 00 03 10 07 FF

The mask color of Mask_A and Mask_B is White (color code 07h), and the mask color of the other Mask (C to X) is semi-transparent Black (color code 10h).

Set Pan Tilt Angle

Command: 8x 01 04 79 0p 0p 0p 0q 0q 0q FF

Parameter:

ppp	Pan Angle
qqq	Tilt Angle See “Setting pan/tilt angle” in “Parameters” on page 15.

Comments: Pan/Tilt angle settings are hexadecimal data.

The resolution of Pan/Tilt angle is 0.088 degrees.

Note

When you set the pan/tilt angle, locate the pan/tilt position at the center point of the FCB camera’s position.

Non Interlock Mask

Command: 8x 01 04 6F mm 0p 0p 0q 0q 0r 0r 0s 0s FF

Parameters:

mm	Setting Mask See “mm: mask setting list” in “Parameters” on page 15.
pp	Sets the center position “x” of the Mask on screen.
qq	Sets the center position “y” of the Mask on screen.
rr	Sets the half value “w” of the Mask Width.
ss	Sets the half value “h” of the Mask Height. See “pp: x, qq: y, rr: w, ss: h” in “Parameters” on page 15.

Commands: Mask does not interlock with pan/tilt.

The limitations of parameters are as follows. (hexadecimal representation)

x: ±50h
w: ±50h
y: ±3ch
h: ±3ch

Note

When the Set Mask command and the Non Interlock Mask command are set to the same mask, the command set later becomes effective.

Grid

Use the grid displayed on the screen to set mask positions (see the figure below).

By executing the Center Line On command, only the x and y axes of the center are displayed. Grids lines disappear.

Alarm Function

This function instructs the camera to detect movement within the monitoring area and then send an alarm signal automatically.

A High level signal is output when camera detects movement inside the monitoring area. A Low level signal is output when object stops moving.

However, when the mode is set to "DAY/NIGHT", the High level signal is output for dark and the Low level signal is output for bright.

The Detect signal goes out through the serial command (VISCA) communication line.

Example

1. A door is motionless, so the Detect Level is Low.
2. At the moment when the door is opened by someone, the Detect Level goes to High.
3. The Detect Level is High while the shooting object is moving.
4. When the door is closed, Detect Level goes to Low again, or signals are output only once at the time of switching between High Level and Low Level.

ALARM Setting Command List

Command Set	Command	Command Packet	Comments
CAM _ Alarm	On	8x 01 04 6B 02 FF	Alarm start
	Off	8x 01 04 6B 03 FF	Alarm stop
	Set Mode	8x 01 04 6C pp FF	Mode Setting *Select one from 13 modes
	Set Day Night Level	8x 01 04 6D 0p 0p 0p 0q 0q 0q FF	ppp: Day distinction AE level qqq: Night distinction AE level.

90 07 04 6B 01 FF	High signal output (Low → High edge)
90 07 04 6B 00 FF	Low signal output (High → Low edge)

VISCA Mode Code (pp)	Details of Mode
00	Set the internal focus position. When focus movement is detected, the detect signal is High. When focus goes back to the previous position, the detect signal is Low.
01	Set a fixed period of time. When focus does not move during the time, the focus position is memorized as a rest position and the detect signal is Low. When focus moves, the detect signal is High. Afterwards when focus does not move for the fixed period of time, the focus position is memorized and the detect signal becomes Low.
02	Set the internal AE Level. When AE movement is detected, the detect signal is High. When AE Level goes back to the previous level, the detect signal is Low.
03	Set a fixed period of time. When AE Level does not change during this time, the AE value is memorized as a rest value and the detect signal is Low. When AE value changes, the detect signal is High. Afterwards when AE value does not change for the fixed period of time, the AE value is memorized and the detect signal becomes Low.
04	mode "00" and mode "02"
05	mode "00" and mode "03"
06	mode "01" and mode "02"
07	mode "01" and mode "03"
08	mode "00" or mode "02"
09	mode "00" or mode "03"
0A	mode "01" or mode "02"
0B	mode "01" or mode "03"
0C	Day-Night Mode

ALARM Inquiry Command List

Inquiry Command	Command Packet	Inquiry Packet	Comments
CAM _ Alarm Inq	8x 09 04 6B FF	y0 50 02 FF	On
		y0 50 03 FF	Off

Eclipse

When designing the housing, refer to the dimensional allowance as shown in the figure below.

Eclipse of the Lens

The eclipse phenomenon occurs with the FCB-980/980P. This is because a sufficient amount of aperture is not available due to the CCD size and the lens structure of the FCB-980/980P. However, it has been verified that the eclipse will not be visible in the case of a more than 90 % effective image.

For your reference, see the following diagram.

Spectral Sensitivity Characteristics

FCB-EX980S/EX980SP

FCB-EX980/EX980P

Vibration Specifications

Test Method (Random vibration)

- Fix the camera at the four fixation points of the base using M2 screws.
- Perform the random vibration test under the following conditions in the X, Y and Z directions for 20 minutes in each direction.
- The camera vibration specification is to have no malfunction after this test.

Power spectrum density	5 to 50 Hz	4.14 m ² /s ³	{0.043 G ² /Hz}
	50 to 100 Hz	-36 dB/oct	
Effective overall value	14.3 m/s ²		{1.46 G}
Test time	20 minutes		

Key Switch Circuitry

The circuitry shown below is an example. Note that all switches in the figure do not function in all models. For more information, refer to the command list, check functions on the camera, or contact your Sony dealer.

a) The CN101 is connected to the CN601 on the FCB camera main unit.

Key Function Specifications

Classification	Name	Function	Button operation	Mode display
ZOOM	WIDE	Move ZOOM to WIDE side quickly.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
	WIDE SLOW	Move ZOOM to WIDE side slowly.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
	TELE SLOW	Move ZOOM to TELE side slowly.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
	TELE FAST	Move ZOOM to TELE side quickly.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
D-ZOOM	DZOOM	Turn on/off the mode for shifting from optical MAX to electronic ZOOM in combined mode.	Switch on/off.	ZOOM bar displayed for 3 s.
	DZOOM WIDE	Move the electronic ZOOM to WIDE side in separate mode.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
	DZOOM TELE	Move the electronic ZOOM to TELE side in separate mode.	Pressing repeatedly allowed.	ZOOM bar displayed for 3 s.
	DZOOM MAX	Switch the electronic ZOOM between 1× and MAX in separate mode.	Switch between 1× and MAX magnification.	ZOOM bar displayed for 3 s.
FOCUS	AF	Switch between Auto Focus and Manual Focus.	Switch between Auto and Manual.	Manual F indication
	NEAR	Move focus to NEAR side in Manual Focus mode.	Pressing repeatedly allowed.	Near indication
	FAR	Move focus to FAR side in Manual Focus mode.	Pressing repeatedly allowed.	Far indication
	ONE PUSH AF	Perform AF operation once in Manual Focus mode.	Request One Push AF.	Manual F indication flashes while request is made.
	INFINITY	Move focus forcibly to Infinity resulting in Manual Focus mode, regardless of the current focus mode.	Request Infinity.	Far indication
AE	AE AUTO	Switch to AE FULL Auto mode.	Request AE Full Auto.	No display
	BRIGHT	Switch to variable brightness mode (BRIGHT), depending on the conditions for mode shifting.	Request Bright mode. Pressing Up/Down key repeatedly allowed.	Bright bar display
	SHUTTER	Shutter priority AE mode	Request shutter priority AE mode.	Shutter code display
	IRIS	Iris priority AE mode	Request iris priority AE mode.	Iris code display
	BACK LIGHT	Switch backlight on/off.	Switch on/off.	Backlight indication
WB	AUTO WB	Switch to AUTO WB mode.	Request Auto WB mode.	No display
	ONE PUSH WB	Switch to One Push WB mode when pressed once and capture data when pressed 2nd time.	Request One Push WB mode and trigger.	One Push indication flashes at 0.8 Hz before capturing data, at 3.2 Hz during capturing, and stays lit after capturing.
	ATW	Switch to ATW mode.	Request AWB mode.	ATW display
	INDOOR	Enable WB at 3200K in INDOOR mode.	Request Indoor mode.	Indoor indication
	OUTDOOR	Enable WB at 5800K in OUTDOOR mode.	Request Outdoor mode.	Outdoor indication
	MANUAL WB	Switch to Manual WB mode. Enable R control when pressed once and enable B control when pressed 2nd time. Switchable with UP/DOWN key.	Switch between R control and B control in manual WB mode./Pressing Up/Down key repeatedly allowed.	“WB-MAN” (character display)

Classification	Name	Function	Button operation	Mode display
FEATURE	FREEZE	Capture still image.	Switch on/off.	FREEZE indication
	LR-REVERSE	Horizontal reversal	Switch on/off.	Horizontal reversal indication
	BLACK & WHITE	Black-and-white output	Switch on/off.	B&W display
	NEGA ART	Negative art output	Switch on/off.	Neg Art display
	MUTE	Mute video output	Switch on/off.	“MUTE” (character display)
DISPLAY	DISPLAY	Display	Switch on/off.	
	TITLE	Title setting	Request setting. → Setting is started with Exec. Pressing Up/Down key repeatedly allowed.	Title setting screen display
	EXEC	Confirm title/clock settings.	Select with Up/Down and confirm with Exec.	Setting screen selection highlighted in yellow.
UP/DOWN	UP	Data UP key (priority for AE mode, Bright, manual WB, title, and clock)	Request UP.	Selection highlighted.
	DOWN	Data DOWN key (priority for AE mode, Bright, manual WB, title, and clock)	Request DOWN.	Selection highlighted.
PRESET	POS1	Recall preset position 1.	Request recall.	RECALL POS0
	POS2	Recall preset position 2.	Request recall.	RECALL POS1
	POS3	Recall preset position 3.	Request recall.	RECALL POS2
	POS4	Recall preset position 4.	Request recall.	RECALL POS3
	POS5	Recall preset position 5.	Request recall.	RECALL POS4
	POS6	Recall preset position 6.	Request recall.	RECALL POS5
	POS7	Recall custom preset.	Request recall.	RECALL
	POS PRESET	Write data. Enabled when pressed together with POS button.	Request setting. Enabled when pressed together with POS key.	PRESET display
POS RESET	Delete data. Enabled when pressed together with POS button.	Request deletion. Enabled when pressed together with POS key.	RESET display	
Others	APERTURE UP	Increase aperture (Aperture UP)	Request UP.	Aperture bar displayed for 3 s.
	AUTO SLOW SHUTTER	Switch Auto Slow Shutter on/off.	Switch on/off.	“ASS” (character display)
	APERTURE DOWN	Decrease aperture (Aperture DOWN)	Request DOWN.	Aperture bar displayed for 3 s.
	AF SENSITIVITY	Switch AF sensitivity between Normal and Low.	Switch between Normal and Low.	“SENS L” (character display)
	BRIGHT UP	Raise brightness setting (Bright UP) (When not in Bright mode, switching to Bright mode is made automatically depending on the conditions.)	Request UP./Pressing repeatedly allowed.	Bright bar display
	BRIGHT DOWN	Lower brightness setting (Bright DOWN) (When not in Bright mode, switching to Bright mode is made automatically depending on the conditions.)	Request DOWN./Pressing repeatedly allowed.	Bright bar display
	ICR ON/OFF	Switch ICR mode on/off	Switch on/off	

Initial Settings, Custom Preset and Backup

Initial settings for the various functions of the FCB camera are indicated in the “Initial settings” column. The “Custom preset” column indicates whether the custom preset function can be used to store the settings. The function enables the stored settings to be recalled automatically when the camera is turned on. The “Standby backup” column indicates whether the data is preserved even when the camera is powered OFF.

Mode/Position setting	Initial settings	Custom preset	Back up at standby
Zoom Position	Wide end	○	○
D-Zoom On/Off	On	○	○
D-Zoom Separate/Combine	Combine	○	○
D-Zoom Position	00h	○	○
Focus Position	—	○	○
Focus Auto/Manual	Auto	○	○
Near Limit Setting	8000h (32cm)	○	○
AF Sensitivity	Normal	○	○
AF Mode	Normal	○	○
AF Run Time	5 sec	○	○
AF Interval	5 sec	○	○
WB Mode	Auto	○	○
WB Data (Rgain, Bgain)	—	○	○
One Push WB Data	—	○	○
AE Mode	Full Auto	○	○
Slow Shutter Mode	Manual	○	○
Shutter Position	1/60sec (NTSC), 1/50sec (PAL)	○	○
Iris Position	—	○	○
Gain Position	—	○	○
Bright Position	—	○	○
Exposure Compensation On/Off	Off	○	○
Exposure Compensation Amount	±0	○	○
BackLight On/Off	Off	○	○
Spot AE On/Off	Off	○	○
Spot AE Position Setting	X=8, Y=8	○	○
Aperture Level	5	○	○
LR Reverse On/Off	Off	○	○
Freeze On/Off	Off	×	×
Picture Effect	Off	○	○
ICR On/Off	Off	○	○
Auto ICR On/Off	Off	○	○
Stabilizer On/Off ¹⁾	Off	○	○
Camera Memory	Same as the initial value setting	○	○
Display On/Off	Off	○	○
Mute On/Off	Off	×	×

A circle “○” in this column signifies that the data is preserved.

A cross “×” signifies that the data IS NOT preserved.

¹⁾ FCB-EX980S/EX980SP only.

Mode/Position setting	Initial settings	Custom preset	Back up at standby
Title Display On/Off	Off	○	○
Title Setting	—	○	○
Mask Setting	—	○	○
Mask Display On/Off	Off	○	○
Mask Color Setting	—	○	○
Alarm On/Off	Off	○	○
Alarm Mode	—	○	○
Alarm Detect Level	—	○	○
E-Flip On/Off	Off	○	○
Privacy Zone On/Off	Off	○	○
Privacy Zone Setting	—	○	○
Key Lock On/Off	Off	○	○
Camera ID	0000h	○	○
External Lock Mode	Internal	○	○
V-Phase	Vsync edge position	○	○
V-Phase Phase Inversion	No inversion	○	○

A circle “○” in this column signifies that the data is preserved.

A cross “×” signifies that the data IS NOT preserved.

Note

The number of times written to EEPROM (when Custom Preset is executed) is limited.

Command List

VISCA¹⁾/RS-232C Commands

This Manual outlines an RS-232 control protocol and command list for certain Sony cameras from which control software can be developed.

THIS CONTROL PROTOCOL AND COMMAND LIST IS PROVIDED BY SONY ON AN “AS-IS BASIS” WITHOUT WARRANTY OF ANY KIND. SONY DOES NOT WARRANT ANY PARTICULAR RESULT FROM THE USE OF THIS CONTROL PROTOCOL AND COMMAND LIST AND DISCLAIMS AND EXCLUDES ALL WARRANTIES. EXPRESS OR IMPLIED, WITH RESPECT TO THAT CONTROL PROTOCOL AND COMMAND LIST, INCLUDING, BUT NOT LIMITED TO, ANY OR ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN FACT, SONY SPECIFICALLY ACKNOWLEDGES THAT SOFTWARE DEVELOPED BASED ON THIS CONTROL PROTOCOL AND COMMAND LIST MAY CAUSE MALFUNCTION OR DAMAGE TO HARDWARE AND SOFTWARE USED WITH IT (INCLUDING SONY HARDWARE AND SOFTWARE) AND SPECIFICALLY DISCLAIMS ANY LIABILITY FOR ANY SUCH MALFUNCTION OR DAMAGE. THIS CONTROL PROTOCOL AND COMMAND LIST SHOULD BE USED WITH CAUTION.

Overview of VISCA

In VISCA, the device outputting commands, for example, a computer, is called the controller. The device receiving the commands, an FCB camera is called the peripheral device. In VISCA, up to seven peripheral devices like the FCB camera can be connected to one controller using communication conforming to the RS-232C standard. The parameters of RS-232C are as follows.

- Communication speed: 9.6 kbps/19.2 kbps/38.4 kbps
- Data bits : 8
- Start bit : 1
- Stop bit : 1/2
- Non parity

Flow control using XON/XOFF and RTS/CTS, etc., is not supported.

1) VISCA is a protocol which controls consumer camcorders developed by Sony. “VISCA” is a trademark of Sony Corporation.

VISCA Communication Specifications

VISCA packet structure

The basic unit of VISCA communication is called a packet. The first byte of the packet is called the header and comprises the sender's and receiver's addresses. For example, the header of the packet sent to the FCB camera assigned address 1 from the controller (address 0) is hexadecimal 81H. The packet sent to the camera

assigned address 2 is 82H. In the command list, as the header is 8X, input the address of the camera at X. The header of the reply packet from the camera assigned address 1 is 90H. The packet from the camera assigned address 2 is A0H.

Some of the commands for setting cameras can be sent to all devices at one time (broadcast). In the case of broadcast, the header should be hexadecimal 88H.

When the terminator is FFH, it signifies the end of the packet.

Command and inquiry

- **Command**
Sends operational commands to the FCB camera.
- **Inquiry**
Used for inquiring about the current state of the FCB camera.

	Command Packet	Note
Inquiry	8X QQ RR ... FF	QQ ¹⁾ = Command/Inquiry, RR ²⁾ = category code

¹⁾ QQ = 01 (Command), 09 (Inquiry)

²⁾ RR = 00 (Interface), 04 (camera 1), 06 (Pan/Tilter), 07 (camera 2)

X = 1 to 7: FCB camera address

Responses for commands and inquiries

● ACK message

Returned by the FCB camera when it receives a command. No ACK message is returned for inquiries.

● Completion message

Returned by the FCB camera when execution of commands or inquiries is completed. In the case of inquiry commands, it will contain reply data for the inquiry after the 3rd byte of the packet. If the ACK message is omitted, the socket number will contain 0.

	Reply Packet	Note
Ack	X0 4Y FF	Y = socket number
Completion (commands)	X0 5Y FF	Y = socket number
Completion (Inquiries)	X0 5Y ... FF	Y = socket number

X = 9 to F: FCB camera address + 8

● Error message

When a command or inquiry command could not be executed or failed, an error message is returned instead of the completion message.

Error Packet	Description
X0 6Y 01 FF	Message length error (>14 bytes)
X0 6Y 02 FF	Syntax Error
X0 6Y 03 FF	Command buffer full
X0 6Y 04 FF	Command cancelled
X0 6Y 05 FF	No socket (to be cancelled)
X0 6Y 41 FF	Command not executable

X = 9 to F: FCB camera address + 8, Y = socket number

Socket number

When command messages are sent to the FCB camera, it is normal to send the next command message after waiting for the completion message or error message to return. However to deal with advanced uses, the FCB camera has two buffers (memories) for commands, so that up to two commands including the commands currently being executed can be received. When the FCB camera receives commands, it notifies the sender which command buffer was used using the socket number of the ACK message. As the completion message or error message also has a socket number, it indicates which command has ended. Even when two command buffers are being used at any one time, an FCB camera management command and some inquiry messages can be executed. The ACK message is not returned for these commands and inquiries, and only the completion message of socket number 0 is returned.

Command execution cancel

To cancel a command which has already been sent, send the Cancel command as the next command. To cancel one of any two commands which have been sent, use the cancel message.

	Cancel Packet	Note
Cancel	8X 2Y FF	Y = socket number

X = 1 to 7: FCB camera address, Y = socket number

An error message will be returned for this command, but this is not a fault. It indicates that the command has been canceled.

VISCA Device Setting Command

Before starting control of the FCB camera, be sure to send the Address command and the IF_Clear command using the broadcast function.

For VISCA network administration

● Address

Sets an address of a peripheral device. Use when initializing the network, and receiving the following network change message.

● Network Change

Sent from the peripheral device to the controller when a device is removed from or added to the network. The address must be re-set when this message is received.

	Packet	Note
Address	88 30 01 FF	Always broadcasted.
Network Change	X0 38 FF	
X = 9 to F: FCB camera address + 8		

VISCA interface command

● IF_Clear

Clears the command buffers in the FCB camera and cancels the command currently being executed.

	Command Packet	Reply Packet	Note
IF_Clear	8X 01 00 01FF	X0 50 FF	
IF_Clear (broadcast)	88 01 00 01 FF	88 01 00 01 FF	
X = 1 to 7: FCB camera address (For inquiry packet)			
X = 9 to F: FCB camera address +8 (For reply packet)			

VISCA interface and inquiry

● CAM_VersionInq

Returns information on the VISCA interface.

Inquiry	Inquiry Packet	Reply Packet	Description
CAM_VersionInq	8X 09 00 02 FF	Y0 50 GG GG HH HH JJ JJ KK FF	GGGG = Vender ID (0020: Sony) HHHH = Model ID 0432: FCB-EX980S 0433: FCB-EX980SP 0430: FCB-EX980 0431: FCB-EX980P JJJJ = ROM revision KK = Maximum socket #(02)

X = 1 to 7: FCB camera address (For inquiry packet)

X = 9 to F: FCB camera address +8 (For reply packet)

VISCA Command/ACK Protocol

Command	Command Message	Reply Message	Comments
General Command	81 01 04 38 02 FF (Example)	90 41 FF (ACK)+90 51 FF (Completion) 90 42 FF 90 52 FF	Returns ACK when a command has been accepted, and Completion when a command has been executed.
	81 01 04 38 FF (Example)	90 60 02 FF (Syntax Error)	Accepted a command which is not supported or a command lacking parameters.
	81 01 04 38 02 FF (Example)	90 60 03 FF (Command Buffer Full)	There are two commands currently being executed, and the command could not be accepted.
	81 01 04 08 02 FF (Example)	90 61 41 FF (Command Not Executable) 90 62 41 FF	Could not execute the command in the current mode.
Inquiry Command	81 09 04 38 FF (Example)	90 50 02 FF (Completion)	ACK is not returned for the inquiry command.
	81 09 05 38 FF (Example)	90 60 02 FF (Syntax Error)	Accepted an incompatible command.
Address Set	88 30 01 FF	88 30 02 FF	Returned the device address to +1.
IF_Clear(Broadcast)	88 01 00 01 FF	88 01 00 01 FF	Returned the same command.
IF_Clear (For x)	8x 01 00 01 FF	z0 50 FF (Completion)	ACK is not returned for this command.
Command Cancel	8x 2y FF	z0 6y 04 FF (Command Canceled)	Returned when the command of the socket specified is canceled. Completion for the command canceled is not returned.
		z0 6y 05 FF (No Socket)	Returned when the command of the specified socket has already been completed or when the socket number specified is wrong.

VISCA Camera-Issued Messages

ACK/Completion Messages

	Command Messages	Comments
ACK	z0 4y FF (y:Socket No.)	Returned when the command is accepted.
Completion	z0 5y FF (y:Socket No.)	Returned when the command has been executed.

z = Device address + 8

Error Messages

	Command Messages	Comments
Syntax Error	z0 60 02 FF	Returned when the command format is different or when a command with illegal command parameters is accepted.
Command Buffer Full	z0 60 03 FF	Indicates that two sockets are already being used (executing two commands) and the command could not be accepted when received.
Command Canceled	z0 6y 04 FF (y:Socket No.)	Returned when a command which is being executed in a socket specified by the cancel command is canceled. The completion message for the command is not returned.
No Socket	z0 6y 05 FF (y:Socket No.)	Returned when no command is executed in a socket specified by the cancel command, or when an invalid socket number is specified.
Command Not Executable	z0 6y 41 FF (y:Socket No.)	Returned when a command cannot be executed due to current conditions. For example, when commands controlling the focus manually are received during auto focus.

Network Change Message

	Command Message	Comments
Network Change	z0 38 FF	Issued when power is being routed.

Horizontal resolution	NTSC: 470 TV lines (WIDE end) PAL: 460 TV lines (WIDE end)	S/N ratio	50 dB
Lens	26× zoom F= 3.5 mm (WIDE) to 91 mm (TELE), F1.6 to F3.8 Zoom movement speed (NTSC) Optical WIDE/Optical TELE 4.0 sec Optical WIDE/Digital TELE 5.9 sec Digital WIDE/Digital TELE 1.9 sec (PAL) Optical WIDE/Optical TELE 3.9 sec Optical WIDE/Digital TELE 6.2 sec Digital WIDE/Digital TELE 2.3 sec Focus Movement time ∞ to Near 1.3 sec	Back light compensation	ON/OFF
Digital zoom	12× (312× with optical zoom)	Electronic shutter speed	FCB-EX980S: 1/4 to 1/10000 sec. (20 steps) FCB-EX980SP: 1/3 to 1/10000 sec. (20 steps)
Angle of view (H)	42.0 degree (WIDE end) to 1.6 degree (TELE end)	White balance	AUTO, ATW, Indoor, Outdoor, One Push WB, Manual WB
Min. working distance	320 mm (WIDE end), 1500 mm (TELE end)	Gain	Auto/Manual (-3 to 28 dB, 16 steps)
Sync system	Internal/External (V-Lock)	Aperture control	16 steps
Min. illumination	2.0 lux/1/60 sec (NTSC), 1/50 sec (PAL) 0.14 lux/1/4 sec (NTSC), 1/3 sec (PAL) ICR-ON Mode 0.7 lux/1/60 sec (NTSC), 1/50 sec (PAL) 0.05 lux/1/4 sec (NTSC), 1/3 sec (PAL)	Preset	6-POSITIONS
		Serial interface	VISCA protocol (TTL/CMOS) 9.6 Kbps, 19.2 Kbps, 38.4 Kbps, Stop bit, 1/2 bit
		Video Output	VBS: 1.0 Vp-p (Sync negative), Y/C Output
		Storage temperature/Humidity	-20 to 60 °C (-4 to 140 °F)/20 to 95 %
		Operating temperature/Humidity	0 to 50 °C (32 to 122 °F)/20 to 80 %
		Power requirements/Power consumption	6 to 12 V DC/1.6 W (3.6 W)
		Weight	230 g (8.1 oz.)
		Dimensions	55.3 × 57.5 × 81.8 mm (2 × 2 1/4 × 3 1/4 in.) (w/h/d)
		Design and specifications are subject to change without notice.	

FCB-EX980/EX980P

Picture elements	FCB-EX980: Approx. 380K pixels FCB-EX980P: Approx. 440K pixels	Recommended illumination	100 to 100,000 lux
Horizontal resolution	NTSC: 470 TV lines (WIDE end) PAL: 460 TV lines (WIDE end)	S/N ratio	50 dB
Lens	26× zoom F= 2.5 mm (WIDE) to 91 mm (TELE), F1.6 to F3.8 Zoom movement speed (NTSC) Optical WIDE/Optical TELE 4.0 sec Optical WIDE/Digital TELE 6.0 sec Digital WIDE/Digital TELE 2.0 sec (PAL) Optical WIDE/Optical TELE 3.9 sec Optical WIDE/Digital TELE 6.3 sec Digital WIDE/Digital TELE 2.4 sec Focus Movement time ∞ to Near 1.3 sec	Back light compensation	ON/OFF
Digital zoom	12× (312× with optical zoom)	Electronic shutter speed	FCB-EX980: 1/4 to 1/10000 sec. (20 steps) FCB-EX980P: 1/3 to 1/10000 sec. (20 steps)
Angle of view (H)	54.2 degree (WIDE end) to 2.2 degree (TELE end)	White balance	AUTO, ATW, Indoor, Outdoor, One Push WB, Manual WB
Min. working distance	320 mm (WIDE end), 1500 mm (TELE end)	Gain	Auto/Manual (-3 to 28 dB, 16 steps)
Sync system	Internal/External (V-Lock)	Aperture control	16 steps
Min. illumination	1.0 lux/1/60 sec (NTSC), 1/50 sec (PAL) 0.07 lux/1/4 sec (NTSC), 1/3 sec (PAL) ICR-ON Mode 0.15 lux/1/60 sec (NTSC), 1/50 sec (PAL) 0.01 lux/1/4 sec (NTSC), 1/3 sec (PAL)	Preset	6-POSITIONS
		Serial interface	VISCA protocol (TTL/CMOS) 9.6 Kbps, 19.2 Kbps, 38.4 Kbps, Stop bit, 1/2 bit

Pin assignment

CN601

MOLEX 52689-1293

Pin No.	Name	Level
1	GND	
2	GND	
3	KEY AD0	
4	KEY AD1	
5	KEY AD2	
6	KEY AD3	
7	KEY AD4	
8	KEY AD5	
9	KEY AD6	
10	KEY AD7	
11	NC	
12	NC	

CN901

Pin No.	Name	Level
1	RxD	CMOS 5V (low: max 0.8V, high: min 2.0V) Read Data
2	TxD	CMOS 5V (low: max 0.1V, high: min 4.4V) Send Data
3	GND (for RxD&TxD)	
4	DC IN	9.0V±3V
5	GND (for DC IN)	
6	VBS OUT	1.0V±0.2V
7	GND (for VBS OUT)	
8	V LOCK PULSE	External VD-Lock Pulse (EX.FV: Negative, 3Vp-p 50% duty)
9	GND (VL PULSE)	

CN902

Pin No.	Name	Level
1	Y_Out	
2	GND (for Y signal)	
3	C_Out	
4	GND (for C signal)
