XCD MV6

The new  
Micro Camera  
from Sony.

From the company that launched the first ever industrial camera and invented the cubic-size format comes the world's smallest C-mount digital machine vision camera. The revolutionary XCD-MV6 punches way above its weight, which is just 37 grams to be precise. It's also lightning fast – competitors beware.

Less than two-thirds the size of the cubic, the new Micro Camera is a marvel of miniaturisation and perfect for machine downsizing. Even better, it's equipped with a high-speed readout sensor with Global Shutter plus shading and defect pixel correction for capturing every detail quickly and efficiently. A lightweight camera that performs like a heavyweight.
