

# Observe. Analyse. React.

Ensure you never miss the moment with Sony XCG GigE cameras.

"Sony" and "make.believe" are trademarks of Sony Corporation.

The XCG Series from Sony is the latest addition to Sony's industrial camera range, where high quality and high performance come as standard. The XCG Series incorporates the latest GigE Vision interface - a specific standard adopted for machine vision and security applications based on Gigabit Ethernet technology. GigE Vision is ideally suited to support the transfer of large amounts of data over long distances. There are four models in the XCG range - XCG-5005E, XCG-U100E, XCG-SX97E and the XCG-V60E. The output modes available are; 5-megapixel and UXGA for high resolution; SXGA for high sensitivity; and VGA which delivers up to 90 frames per second. The XCG camera range offers choice, flexibility, processing capabilities and ultra 5 megapixel resolution options. The XCG Series is ideally suited to intelligent security applications such as recognition, measurement and pattern matching within the ITS and other high end security applications such as IR wavelength coverage.
